

***Square body demonstrates powerful downsizing capacity.***

# JIG CYLINDERS C SERIES

***Richly abundant series of 9 different types and 69 models***

A rich series configuration spanning from  $\phi 6$  [0.236in.] to  $\phi 100$  [3.940in.] responds to diverse needs far better than previous thin type cylinders.

Moreover, Non-ion specification is also available as standard.

(Excludes  $\phi 6$  [0.236in.],  $\phi 8$  [0.315in.], and  $\phi 10$  [0.394in.])

***Provides powerful back-up for device miniaturization***

Exhibits no protrusions in its external shape even after a sensor switch has been mounted, for easy mounting in tight spaces.

This cylinder is one step up on cylinders of the same class in terms of size, mass, and performance.

**$\phi 6$   
[0.236in.]**

**$\phi 100$   
[3.940in.]**

## **New Line-Up Includes $\phi 6$ [0.236in.], $\phi 8$ [0.315in.], and $\phi 10$ [0.394in.]**

For a greater selection in response to needs for miniaturization, 3 new bore sizes at  $\phi 6$ ,  $\phi 8$ , and  $\phi 10$  have been added, increasing the range of sizes to choose from.

**Standard Cylinders**

$\phi 6$  [0.236in.]~ $\phi 100$  [3.940in.]

**Non-rotating Cylinders**

$\phi 6$  [0.236in.]~ $\phi 10$  [0.394in.]

**Double Rod Cylinders**

$\phi 6$  [0.236in.]~ $\phi 100$  [3.940in.]

## The Jig Cylinders C Series Includes the 9 Types Shown Below.

■ Standard Cylinders

p.137

■ Non-rotating Cylinders

p.145

■ Square Rod Cylinders

p.149

■ Double Rod Cylinders

p.154

■ Tandem Cylinders

p.161

■ Dual Stroke Cylinders

p.170

■ Lateral Load Resistant Cylinders

p.180

■ Long Stroke Cylinders

p.185

■ End Keep Cylinders

p.190

■ Mounting Brackets

p.197

■ Sensor Switches

p.199

	Operation type			Cylinder specifications		Rod end specifications		Bumpers	Centering location	Non-ion specification	Mounting brackets		
	Double acting type	Single acting push type	Single acting pull type	Cylinder with magnet	Heat resistant type	Female thread	Male thread	Not available for heat resistant type		Not available for heat resistant type	Foot mounting bracket	Flange mounting bracket	Clevis mounting bracket
Standard Cylinders													
Non-rotating Cylinders	Note			Note		Note	Note						
Square Rod Cylinders													
Double Rod Cylinders													
Tandem Cylinders													
Dual Stroke Cylinders													
Lateral Load Resistant Cylinders													
Long Stroke Cylinders													
End Keep Cylinders													

■ The colored areas include bore sizes of  $\phi 6$ ,  $\phi 8$ , and  $\phi 10$ .

Note: Non-rotating cylinders are set at bore sizes  $\phi 6$ ,  $\phi 8$ , and  $\phi 10$  only.

## Cylinder Thrust

Select a suitable bore size considering the load and air pressure to obtain the required thrust.

Since the figures in the table are calculated values, select a bore size that results in a load ratio (load ratio =  $\frac{\text{Load}}{\text{Calculated value}}$ ) of 70% or less (50% or less for high speed).

## ● How to read the thrust table

- For the thrust of the double rod cylinder double acting type, see the pull side of the double acting type thrust table. For the thrust of the single acting type, see the single acting pull type thrust table.
- The thrust of the tandem cylinder is double that of the standard type when air is supplied simultaneously to Port A and Port B, for any operation type before the stroke in Cylinder 1 is complete. When air is supplied to any of Ports A, B, or C alone, then the thrust is the same as for the standard type.

- The thrust for dual stroke cylinders is the same as for the standard type, for any operation type.
  - When directly carrying a load, care must be exercised of a lateral load.
- For details, see p.206 "Lateral Load."

## ● Square rod cylinders

# JIG CYLINDERS C SERIES NON-ROTATING CYLINDERS

## Double Acting Type

### Symbol

### Specifications

Item	Bore size mm [in.]	6 [0.236]	8 [0.315]	10 [0.394]
Operation type		Double acting type		
Media		Air		
Operating pressure range	MPa [psi.]	0.15~0.9 [22~131]		
Proof pressure	MPa[psi.]	1.35 [196]		
Operating temperature range	°C [°F]	0~60 [32~140]		
Operating speed range	mm/s [in./sec.]	50~500 [2.0~19.7]		
Cushion		—		
Lubrication		Not required (If lubrication is required, use Turbine Oil Class 1 [ISO VG32] or equivalent.)		
Non-rotating accuracy		±2°	±1.6°	±1.4°
Port size		M3×0.5		

Remark: For Handling Instructions and Precautions, see p.205.

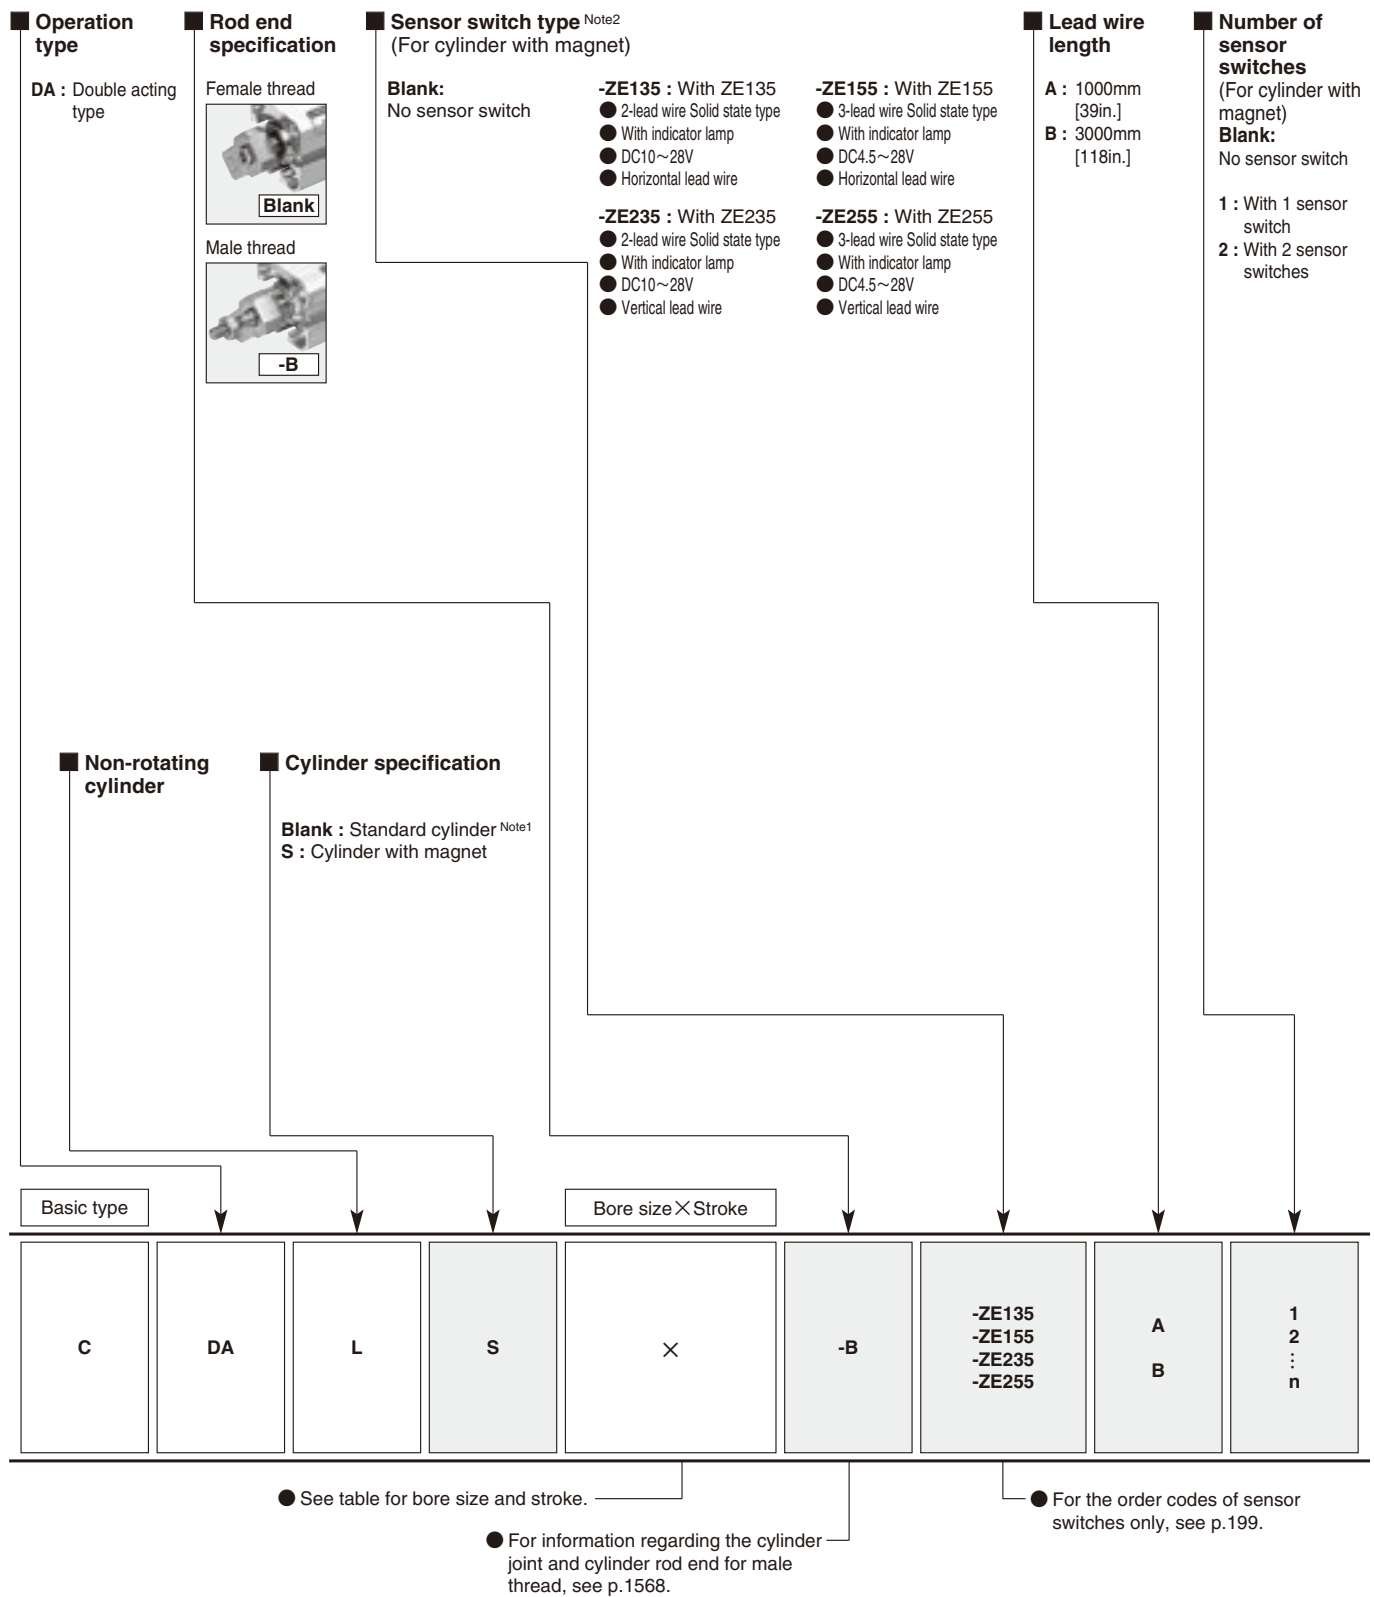

### Bore Size and Stroke

For non-standard strokes, see p.206.

Bore size	Standard strokes	
	Standard cylinder	Cylinder with magnet
6	5, 10	5, 10
8		
10		

Remark: Stroke tolerance  ${}^{+1}_{0} \left[ {}^{+0.039}_{0} \text{in.} \right]$

## Order Codes for Non-rotating Cylinders

Notes: 1. In the standard cylinder, a magnet for the sensor switch is not built-in.  
2. For details of sensor switches, see p.1544.

## Inner Construction and Major Parts

### ● Double acting type

●  $\phi 6 \sim \phi 10$

### ● Cylinder with magnet

## Major Parts and Materials

Parts	Bore mm	$\phi 6 \sim \phi 10$
Cylinder body		Aluminum alloy (anodized)
Piston		Stainless steel
Seal		Synthetic rubber (NBR)
Seal holder		Copper alloy
Rod cover		Aluminum alloy (special wear resistant treatment)
Plate		Copper alloy (nickel plated)
Setscrew		Steel
Magnet		Neodymium magnet
Magnet holder		Copper alloy
Guide rod		Stainless steel

## Mass

Bore size mm [in.]	Basic mass <sup>Note1</sup>		Mass with sensor		Additional mass of sensor switch <sup>Note2</sup>	
	5mm stroke	10mm stroke	5mm stroke	10mm stroke	ZE□□□A	ZE□□□B
<b>6 [0.236]</b>	19.8 [0.698]	23.4 [0.825]	23.1 [0.815]	27.1 [0.956]	15 [0.53]	35 [1.23]
<b>8 [0.315]</b>	26.4 [0.931]	31.1 [1.097]	31.2 [1.101]	36.3 [1.280]		
<b>10 [0.394]</b>	33.7 [1.189]	39.2 [1.383]	39.9 [1.407]	45.9 [1.619]		

Notes: 1. The above table is for the standard strokes.

2. Sensor switch codes A and B show the lead wire lengths.

A: 1000mm [39in.] B: 3000mm [118in.]

Calculation example: For the mass of a double acting type cylinder with magnet, bore size of 8mm, stroke of 10mm, and with 2 sensor switches (ZE135A)  
 $36.3 + (15 \times 2) = 66.3\text{g}$  [2.339oz.]

10	[0.394]	20	10	8	7	2.4	M4×0.7	5	4	5

Remark: Cylinder joints and cylinder rod ends are available for mounting with the rod end male thread specification. For details, see p.1568.

# JIG CYLINDERS C SERIES MOUNTING BRACKETS

Foot Mounting Bracket, Flange Mounting Bracket, Clevis Mounting Bracket

## Order Codes of Mounting Bracket Only

- Notes: 1. Cannot be mounted on tandem or dual stroke cylinders.  
 And cannot be mounted on the 5mm strokes of  $\phi 16$  and  $\phi 25$ , and 10mm strokes of  $\phi 50$ ,  $\phi 63$ , and  $\phi 80$  of the standard cylinders.
2. Cannot be mounted on the head side of the tandem cylinder, cylinder 1 side of the dual stroke cylinder, the rod side of the square rod cylinder with centering location, or the bore size  $\phi 40$  with centering location (-G).
3. Cannot be used with anything other than the long stroke cylinder, the lateral load resistant cylinder, or the end keep cylinder.
4. Applicable to the foot mounting bracket only.
5. Not available for  $\phi 6$  [0.236in.],  $\phi 8$  [0.315in.], and  $\phi 10$  [0.394in.].

## Dimensions of Foot Mounting Bracket (mm)

$\phi 12 \sim \phi 40$  : CDA-OP1,  $\phi 50 \sim \phi 100$  : CDA-OP2

### ● $\phi 12 \sim \phi 16$

### ● $\phi 20 \sim \phi 100$

Note: Only for  $\phi 50$

### ● Mounting screw For $\phi 12 \sim \phi 80$

### For $\phi 100$

Material: Steel

Notes: 1. CD = Swing range of clevis mounting bracket itself.

2. CF = Maximum radius of swing for mating bracket.

Remark: φ 12~φ 50 are mounted with 2 bolts.

## Mounting Sensor Switch

●  $\phi 6 \sim \phi 12$

●  $\phi 16$

●  $\phi 20 \sim \phi 100$

● The drawing is for  $\phi 32$ .

The standard mounting positions at shipping for the end of stroke detection on the rod side is either surface (A) or surface (C), while the end of stroke detection on the head side is surface (B).  
If mounting sensor switches on the same surface for detection of both ends is required, consult us.  
(The sensor switch may sometimes protrude from the cylinder body.)

Mounting on any of surfaces (A), (B), or (C) allows detection of the end of stroke on the rod side and head side.  
(The sensor switch may sometimes protrude from the cylinder body.)

Mounting on any of surfaces (A), (B), (C), or (D) allows detection of the end of stroke on the rod side and head side.  
(The sensor switch may sometimes protrude from the cylinder body.)  
However, the ZE2□□ sensor switches cannot be mounted on the (D) position in  $\phi 32$ ,  $\phi 40$ , and  $\phi 50$ .

## Mounting Location of End of Stroke Detection Sensor Switch

When the sensor switch is mounted in the position shown in the diagram below (figures in the tables are reference values), the magnet reaches the sensor switch's maximum sensing location at the end of the stroke.

# Handling Instructions and Precautions

## Body mounting

Jig cylinder mounting holes include both through holes with female mounting thread, and dedicated female mounting threads, for a variety of mountings. For details, see the diagrams below.

### Standard cylinders, Double rod cylinders

- Standard cylinders
- Long stroke cylinders

- Double rod cylinders
- End keep cylinders

- Lateral load resistant cylinders

●  $\phi 6 \sim \phi 12$

●  $\phi 16$

●  $\phi 20, \phi 25$

●  $\phi 32 \sim \phi 100$

Remark: Mounting methods are the same regardless of bore sizes.

### Non-rotating cylinders

- $\phi 6, \phi 8, \phi 10$

### Square rod cylinders

- $\phi 20, \phi 25$

- $\phi 32 \sim \phi 63$

Remark: Mounting methods are the same regardless of bore sizes. However, the mounting method for "with centering location" differs from the figure above. See p.153.

### Tandem cylinders

- $\phi 12$

- $\phi 16$

- $\phi 20, \phi 25$

- $\phi 32 \sim \phi 100$

Remark: Mounting methods are the same regardless of bore sizes.

### Dual stroke cylinders

- $\phi 12$

- $\phi 16$

- $\phi 20, \phi 25$

- $\phi 32 \sim \phi 100$

Remark: Mounting methods are the same regardless of bore sizes.

- Notes: 1. Avoid applying lateral loads on the piston rod, with the exception of Lateral load resistant cylinders, Long stroke cylinders, and End keep cylinders.
2. When using through holes for mounting, always use the supplied dedicated washers. (except  $\phi 6, \phi 8$ , and  $\phi 10$ )
3. Mount an external stopper, etc., to prevent the cylinder from being subjected to direct shocks during operation.

### Tightening thread of the end of piston rod

Since a tool (thin wrench) has been prepared for holding the piston rod when tightening the rod end thread, consult us.

Order code: L115069

- Always use the supplied dedicated washer whenever using a through bolt to directly mount the cylinder body in place.\* Use the bolts shown in the table below to mount in place. And for bolts used for direct mounting, see p.209.

\*Washer not available for bore sizes  $\phi 6, \phi 8$ , and  $\phi 10$ .

Bore size mm [in.]	6	8	10	12	16	20	25	32	40	50	63	80	100
	[0.236]	[0.315]	[0.394]	[0.472]	[0.630]	[0.787]	[0.984]	[1.260]	[1.575]	[1.969]	[2.480]	[3.150]	[3.940]
Hexagon socket head bolt nominal size	M3	M3	M3	M3	M3	M3	M4	M4	M5	M6	M6	M8	M10

**Bracket mounting**

- Foot mounting brackets cannot be installed on tandem cylinders and dual stroke cylinders.
- Flange mounting brackets cannot be installed on the head side of tandem cylinders and the stroke 1 side of dual stroke cylinders.
- Clevis mounting brackets cannot be installed on anything except for lateral load resistant cylinders, long stroke cylinders, and end keep cylinders.

**Non-standard stroke**

- In most cases, body cutting is used for the manufacturing for non-standard strokes. However, body cutting is not used for strokes of less than 5mm for  $\phi 12$  [0.472in.]~ $\phi 40$  [1.575in.], and strokes of less than 10mm for  $\phi 50$  [1.969in.]~ $\phi 100$  [3.940in.]. The collar packed is used for these cases. Moreover, sizes  $\phi 6$  [0.236in.]~ $\phi 10$  [0.394in.] are collar packed only. For delivery, consult us.
- Rod side end keep cylinders cannot be collar packed.
- Dimensions
  1. Additional strokes obtained by body cutting remain classed as non-standard strokes.
  2. Additional strokes obtained by collar packed are classed as standard strokes in the longer one.

**Lateral Load**

- Keep the lateral load on the rod end of the lateral load resistant cylinder, long stroke cylinder, and end keep cylinder, at or below the values shown in the graphs below.

Note: Avoid applying lateral load on any cylinder types other than the lateral load resistant cylinder, long stroke cylinder, and end keep cylinder.

**● Lateral load resistant cylinders****● Standard type (CBDA)**●  $\phi 12$  [0.472in.]~ $\phi 20$  [0.787in.]●  $\phi 25$  [0.984in.]~ $\phi 40$  [1.575in.]●  $\phi 50$  [1.969in.]~ $\phi 100$  [3.940in.]

1N = 0.2248lbf.  
1mm = 0.0394in.

**● Cylinder with magnet (CBDAS)**●  $\phi 12$  [0.472in.]~ $\phi 20$  [0.787in.]●  $\phi 25$  [0.984in.]~ $\phi 50$  [1.969in.]●  $\phi 63$  [2.480in.]~ $\phi 100$  [3.940in.]

1N = 0.2248lbf.  
1mm = 0.0394in.

**● Long stroke cylinders, End keep cylinders****● Standard type (CCDA,CCDAK)**●  $\phi 12$  [0.472in.]~ $\phi 20$  [0.787in.]●  $\phi 25$  [0.984in.]~ $\phi 50$  [1.969in.]●  $\phi 63$  [2.480in.]~ $\phi 100$  [3.940in.]

1N = 0.2248lbf.  
1mm = 0.0394in.

**● Cylinder with magnet (CCDAS, CCDAKS)**●  $\phi 12$  [0.472in.]~ $\phi 20$  [0.787in.]●  $\phi 25$  [0.984in.]~ $\phi 40$  [1.575in.]●  $\phi 50$  [1.969in.]~ $\phi 100$  [3.940in.]

1N = 0.2248lbf.  
1mm = 0.0394in.

## Handling Instructions and Precautions

### Single acting cylinders

Standard cylinders single acting push type  
Standard cylinders single acting pull type  
Double rod cylinders single acting type  
Tandem cylinders single acting push type  
Dual stroke cylinders single acting push type  
Dual stroke cylinders single acting pull type

If in the above types' application, air is being continuously applied from a connection port, and the spring remains in a compressed state for long periods of time, the piston may sometimes fail to return to its original position even after the air is exhausted. If equipment is to be used in this way over long periods of time, consult us.

### End keep cylinder

#### ● Control circuit

1. For control of Jig end keep cylinders, we recommend the use of 2-position, 4-, 5-port valves. Avoid the use of a control circuit of ABR connections (exhaust centers) with 3-position valves that exhaust air from 2 ports.
2. Always use meter-out control for speed control. Meter-in control may result in failure of the locking mechanism to release.

Notes: 1. It is dangerous to supply air to a connection port on a side with a locking mechanism while already exhausted, because the piston rod could suddenly extend (retract). In addition, it could also cause galling of the lock piston and piston rod, resulting in defective operation. Always supply air to the connection port on the opposite side to ensure back pressure is applied.

2. When restarting operations after air has been exhausted from the cylinder due to completion of operations or to an emergency stop, always start by supplying air to the connection port on the opposite side of the locking mechanism.
3. Connect the valve port A (NC) to the connection port on the side with the locking mechanism.

#### ● Manual operation of the locking mechanism

While the locking mechanism is normally released automatically through cylinder operations, it can also be released manually. For manual release, insert an M3 × 0.5 screw that has 30mm [1.18in.] below head length into the manual override opening, thread it in about 3 turns into the internal lock piston, and then pull up the screw. To maintain the manual override for adjustment, etc., thread the locknut onto the screw and, with the locking mechanism in a released state, tighten the locknut against the cylinder.

- Notes: 1. It is dangerous to release the lock when a load (weight) is present on the piston rod, because it may cause a sudden fall or cause the unintended piston rod's extension (retraction). In this case, always supply air to the connection port opposite the one adjacent to the locking mechanism before releasing the locking mechanism.
2. If the locking mechanism cannot easily be released even with manual override, it could be the result of galling of the lock piston and piston rod. In this case, supply air to the connection port opposite the one adjacent to the locking mechanism before releasing the locking mechanism.
  3. Because water, oil, dust, etc., entering via the manual override opening could be a cause of defective locking or other erratic operation, use a cover, etc., for protection when using in locations subject to dripping water, dripping oil, or to large amounts of dust, etc.

### Sensor switch

In the standard cylinder, a magnet for the sensor switch is not built-in.

To install a sensor switch, a cylinder with a built-in magnet for the sensor switch is required.

- Notes: 1. For the sensor switch mounting location and moving ranges, see p.199.
2. Contact protection measures are required for connecting inductive loads to reed sensor switches or for when capacitive surges are generated. For contact protection measures, see p.1566.

### Piping

Always thoroughly blow off (use compressed air) the tubing before connecting it to the cylinder. Entering chips, sealing tape, rust, etc., generated during piping work could result in air leaks or other defective operation.

### Atmosphere

1. If using in locations subject to dripping water, dripping oil, etc., or to large amounts of dust, use a cover to protect the unit.
2. The product cannot be used when the media or ambient atmosphere contains any of the substances listed below.  
Organic solvents, phosphate ester type hydraulic oil, sulphur dioxide, chlorine gas, or acids, etc.

### Lubrication

The product can be used without lubrication, if lubrication is required, use Turbine Oil Class 1 (ISO VG32) or equivalent.

Avoid using spindle oil or machine oil.

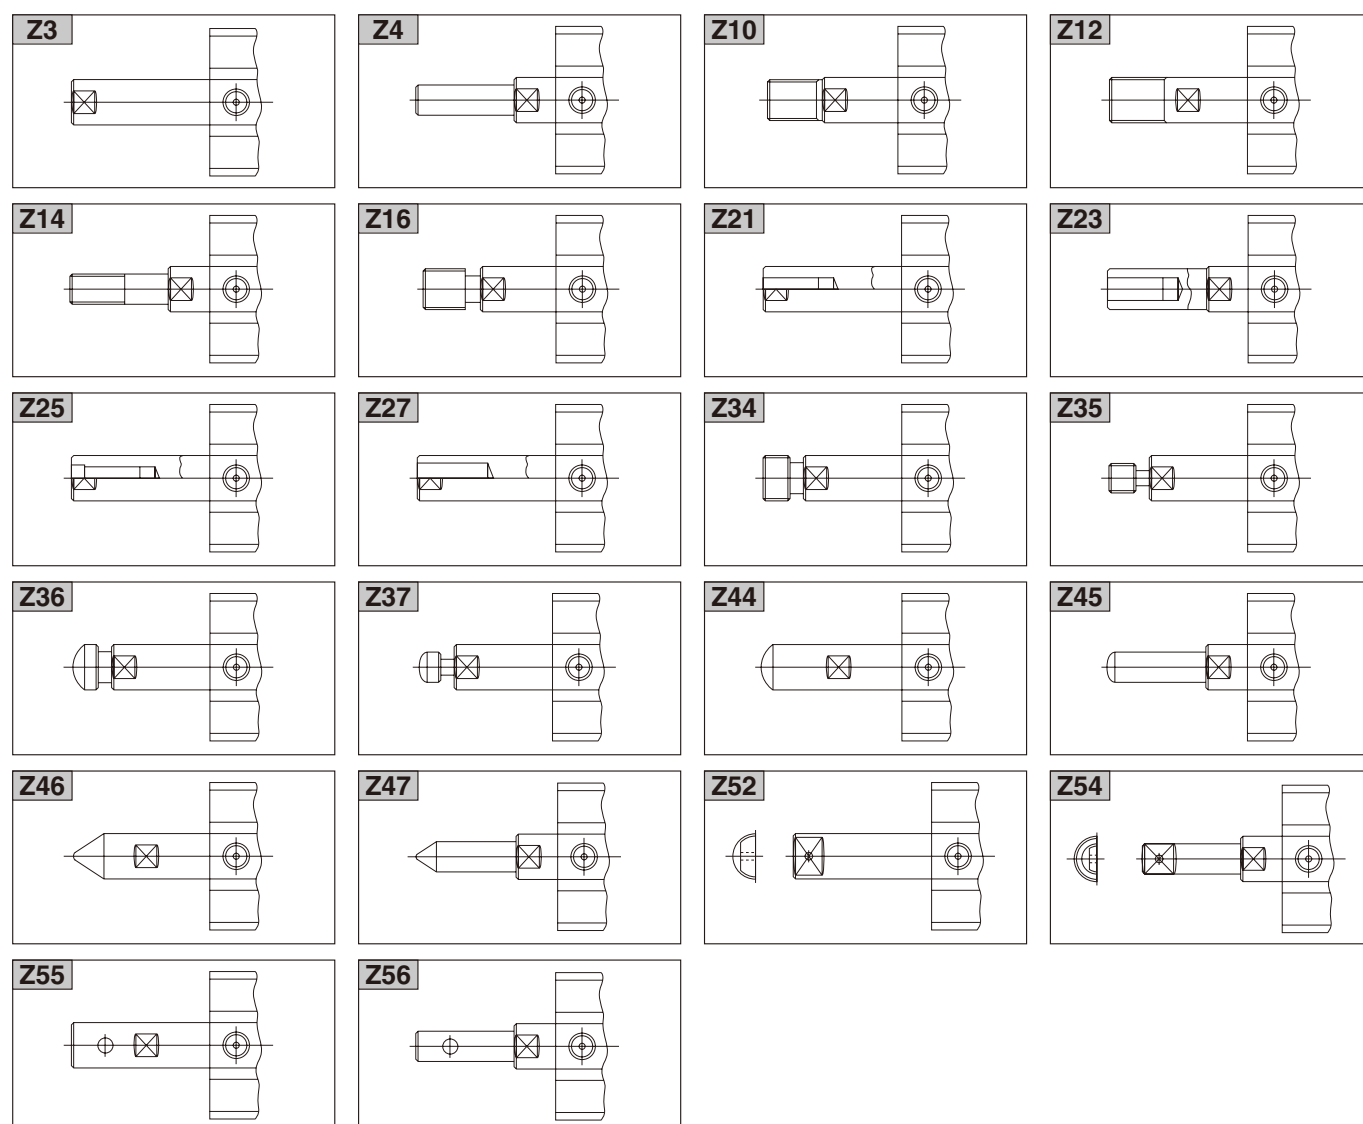

# OPTIONAL ROD END SHAPE PATTERNS

Use an order form of rod end pattern and fill the items on the selected one from among 22 types of optional patterned shapes to obtain made-to-order cylinders of non-standard rod end shapes. The optional rod end shapes can be applied to the entire Jig Cylinders C Series. For the order form containing the optional patterned shapes, contact us.  
(Except  $\phi 6$ ,  $\phi 8$ ,  $\phi 10$ )

## Order Codes
