

DYNA CYLINDERS

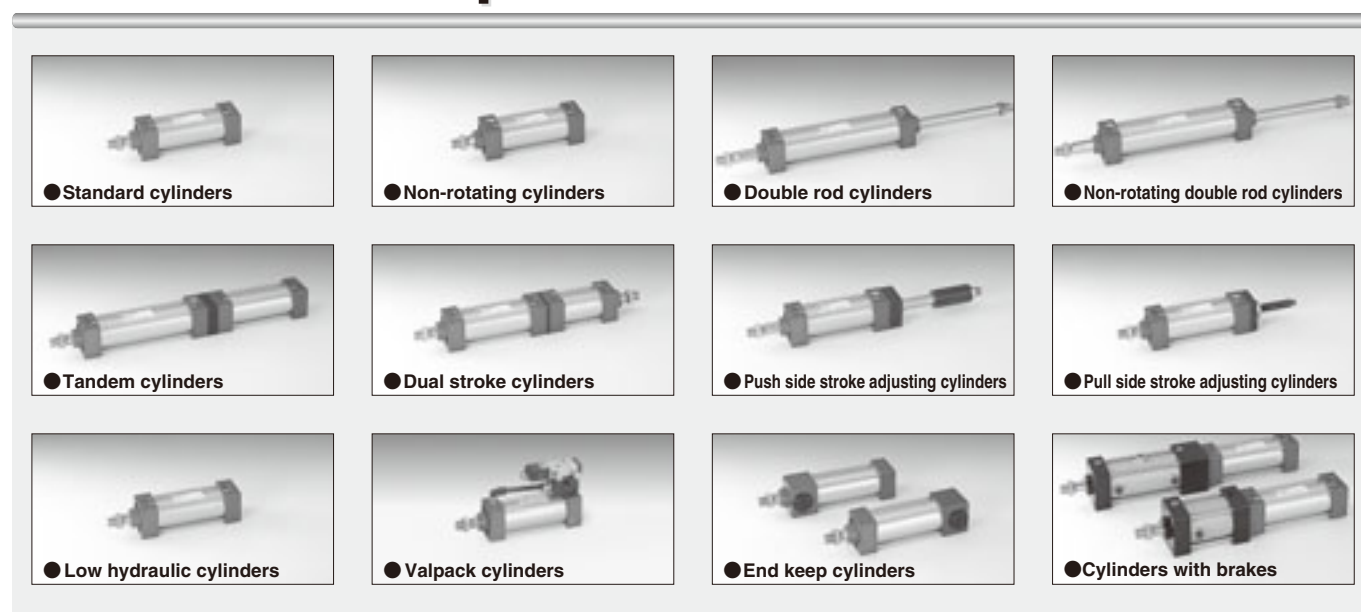

*Ultra-reliable, high-function
tie-rod cylinder*

The DYNA cylinders, compact and lightweight mid-sized actuators compatible with ISO standards, offer a wide range of configurations and mounting types to meet various application requirements in a flexible manner.

Moreover, the use of a new type of cushion needle and floating seal have made these products user-friendlier.

Mounting type

Accessory

design in the smallest standard size for a mid-sized,

1 Extensive variation of functions

■ The series configuration together with its versatile functionality and specifications offers the best match for various mechanical devices.

2 Improved cushioning

■ Improved cushioning is gained by utilizing floating seal in the cushion section.

3 Long life

■ Oil impregnated sintered copper alloy in bushings enables stable operation and longer life.

4 New cushion needle

■ Using a new type of cushion needle that is completely embedded in the cylinder body offers fine adjustment for better performance.

5 Safe self-locking mechanism

■ New release of cylinders with brakes. Exhausting compressed air pushes a brake shoe against the piston rod thereby stopping the cylinder.

※ Steel balls and a brake shoe are secured in position. Operating the brake piston enables activation or release of the brake.

■ Series configurations

mm [in.]

General precautions

Media

1. Use air for the media. For the use of any other media, consult us.
2. Air used for the DYNA cylinder should be clean air that contains no deteriorated compressor oil, water, dust, etc. Install an air filter (filtration of a minimum 40 μm) near the cylinder or valve to remove collected liquid or dust. In addition, drain the air filter periodically.

Piping

Always thoroughly blow off (use compressed air) the tubing before connecting it to the DYNA cylinder. Entering chips, sealing tape, rust, etc., generated during piping work could result in air leaks or other defective operation.

Atmosphere

If using in locations subject to dripping water, dripping oil, etc., or to large amounts of dust, use a cover to protect the unit.

Lubrication

This equipment can be used without lubrication. If lubrication is required, use Turbine Oil Class 1 (ISO VG32) or lithium soap-based grease No.2 or equivalent.

Handling

Assembly of mounting bracket

Use mounting screws which are supplied with the bracket to assemble the mounting bracket. Use an Allen wrench to tighten the mounting screws evenly. When 4 screws are used, tighten diagonally from each corner. The tightening torque is shown below.

Assembly and disassembly

For disassembly, insert an Allen wrench to loosen the tie rod nut, and remove the cover.

For assembly, screw in the tie rod nut with the hexagon socket facing outward. Evenly tighten diagonally from each corner. The tightening torque is shown below.

〈Tightening torque of mounting brackets and tie rod nuts〉

Bore size mm [in.]	Tightening torque
32, 40, 50 [1.260, 1.575, 1.969]	4.81N·m [3.55ft·lbf]
63 [2.480]	12.0N·m [8.85ft·lbf]
80, 100 [3.150, 3.940]	24.0N·m [17.7ft·lbf]
125 [4.921]	42.2N·m [31.1ft·lbf]

● Width across flats of hexagon socket mm [in.]

Bore size	Tie rod nut	Mounting bracket
32 [1.260]	6 [0.236]	4 [0.157]
40, 50 [1.575, 1.969]	6 [0.236]	4 [0.157]
63 [2.480]	8 [0.315]	5 [0.197]
80, 100 [3.150, 3.940]	10 [0.394]	6 [0.236]
125 [4.921]	12 [0.472]	8 [0.315]

● φ 32 [1.260in.]

Use hexagon socket tie rod nuts on both sides for only 32φ

● φ 40 [1.575in.]~ φ 125 [4.921in.]

Manual operation of end keep cylinder locking mechanism

While the locking mechanism is normally released automatically through cylinder operations, it can also be released manually. For manual release, insert an M4×0.7 screw that has 30mm [1.18in.] screw length into the manual override opening, thread it in about 3 turns into the internal lock piston, and then pull up the screw. To maintain the manual override for adjustment, etc., thread the locknut onto the screw and, with the locking mechanism in a released state, tighten the locknut against the cylinder.

- Cautions:**
1. It is dangerous to release the lock when load (weight) is present on the piston rod, because it may cause the unintended piston rod's extension (or retraction). In this case, always supply air to the connection port opposite the one adjacent to the locking mechanism before releasing the locking mechanism.
 2. If the locking mechanism cannot easily be released even with manual override, it could be the result of galling of the lock piston and piston rod. In this case, supply air to the connection port opposite the one adjacent to the locking mechanism before releasing the locking mechanism.
 3. Because water, oil, dust, etc., intruding through the manual override opening may be a cause of defective locks or other erratic operation. If using in locations subject to dripping water, dripping oil, etc., or large amounts of dust, use a cover to protect the unit.
 4. If the circuit cannot maintain exhaust pressure at 0.03MPa [4.4psi.] or less due to using a manifold valve, use individual valve for operations.

Dedicated muffler

The dedicated muffler can be mounted on the manual override opening.
Dedicated muffler model **SA-5** (mm)

Control circuit for the end keep cylinder

1. For control of the DYNA end keep cylinders, we recommend the use of 2-position, 4-, 5-port valves. Avoid the use of control circuit of ABR connections (exhaust centers) with 3-position valves that exhaust air from 2 ports.
2. Always use meter-out control for speed control. Meter-in control may result in failure of the locking mechanism to release.
3. Always set the air pressure to 0.15MPa [22psi.] or more.

- Cautions:**
1. It is dangerous to supply air to a connection port on a side with a locking mechanism while the cylinder has already been exhausted, because the piston rod may suddenly extend (or retract). In addition, since the lock piston could also cause galling of the lock piston and piston rod, resulting in defective operation. Always supply air to the connection port on the opposite side of the locking mechanism to ensure applying back pressure.
 2. When restarting operations after air has been exhausted from the cylinder due to completion of operations or to an emergency stop, always start by supplying air to a connection port on the opposite side of the locking mechanism.
 3. Connect the valve port A (NC) to the connection port on the side with the locking mechanism.

Handling Instructions and Precautions

Mounting and piping (for cylinder with brake)

Operating principle

The cylinder with brake uses a mechanism that consists of steel balls contacting a incline and it receives components of a spring force, then it transmits the force via a brake shoe to apply to the piston rod.

● When the brake is released

● When the brake is applied

When the brake is released

A supply of compressed air from the brake releasing port causes the brake piston including the taper ring, to retract thereby freeing the steel balls from the taper ring, which releases the brake and lets the piston rod freely slide.

When the brake is applied

Exhausting compressed air from the brake releasing port causes the spring to press against the brake piston, transmitting components of spring force via the taper ring to the steel balls, which then works via the brake shoe to transmit a perpendicular force to the piston rod and to apply friction force to the brake.

Precautions for installation

1. In the cylinder with brake, the brake piston in the single brake type is secured in place with 2 hexagon socket screws, and in the double brake type with 4 such screws, with the brake set in a released state at shipping.

When piping and installation is completed, or when performing operation checks, first supply at least 0.35MPa [51psi.] (0.4MPa [58psi.] for bore size of $\phi 50$ [1.969in.]) of air to the brake release port, and remove the screws. Then exhausting the compressed air enables the piston rod to be held. While the unit could be operated with the screws removed, it is better for prevention of entering dust to use screws with nuts to secure it in place by inserting 2 or 3 thread ridges into the cylinder.

At this time, do not excessively tighten the screws as they could interfere with the brake piston, by re-locking it in place, or by constricting its movements.

2. Poor centering of the Cylinder with Brake may damage the seal or hasten wear on the brake shoe.

As poor centering could also result in inaccuracy of the stopping position, use of a cylinder joint is recommended.

Mounting and piping (for cylinder with brake)

Control circuit

Electric control

When using a sequencer for control, the scanning time of the sequencer will affect the stopping position error. To improve the stopping position accuracy, use a TTL circuit, etc., to directly control the signal from the cylinder's sensor switch, and operate the valve.

Pneumatic circuit

1. To achieve a balance with the load, and a balance of differences in rod diameter area, always use a regulator with check valve.
2. For the cylinder control solenoid valve (V1), use a PAB connection 3-position solenoid valve, etc.
3. Install the solenoid valve for the brake (V2) as close to the cylinder as possible. Moreover, using a DC current solenoid valve will improve response (stopping position accuracy).

Example of basic circuit (Reference)

● Horizontal mounting Spring lock

Regulator pressure setting

$$P2 = \frac{D^2 - d^2}{D^2} \cdot P1$$

D : Cylinder bore size (mm)
d : Rod diameter (mm)
P1 : Supply pressure (MPa)

Regulator pressure setting

$$P2' = \frac{D'^2 - d'^2}{D'^2} \cdot P1'$$

D' : Cylinder bore size [in.]
d' : Rod diameter [in.]
P1' : Supply pressure [psi.]

● Vertical mounting Spring lock

Regulator pressure setting

$$P2 = \frac{\pi (D^2 - d^2) P1 - 4W}{\pi \cdot D^2}$$

D : Cylinder bore size (mm)
d : Rod diameter (mm)
P1 : Supply pressure (MPa)
W : Load (N)

Regulator pressure setting

$$P2' = \frac{\pi (D'^2 - d'^2) P1' - 4W'}{\pi \cdot D'^2}$$

D' : Cylinder bore size [in.]
d' : Rod diameter [in.]
P1' : Supply pressure [psi.]
W' : Load [lbf]

● Vertical mounting (push up)

Regulator pressure setting

$$P2 = \frac{\pi \cdot D^2 \cdot P1 - 4W}{\pi (D^2 - d^2)}$$

D : Cylinder bore size (mm)
d : Rod diameter (mm)
P1 : Supply pressure (MPa)
W : Load (N)

Regulator pressure setting

$$P2' = \frac{\pi \cdot D'^2 \cdot P1' - 4W'}{\pi (D'^2 - d'^2)}$$

D' : Cylinder bore size [in.]
d' : Rod diameter [in.]
P1' : Supply pressure [psi.]
W' : Load [lbf]

ON, OFF switch sequence for solenoid
(same for all mounting positions)

Valve	V1			V2
	SOL1	SOL2	SOL3	
Operating state				
Intermediate stop	OFF	OFF	OFF	OFF
Forward	OFF	ON	ON	ON
Reverse	ON	OFF	ON	ON

Air Flow Rate and Air Consumption

While the air cylinder's air flow rate and air consumption can be found through the following calculations, the quick reference chart to the right provides the answers more conveniently.

Air flow rate
$$Q_1 = \frac{\pi D^2}{4} \times L \times \frac{60}{t} \times \frac{P+0.1013}{0.1013} \times 10^{-6}$$

Air consumption
$$Q_2 = \frac{\pi D^2}{4} \times L \times 2 \times n \times \frac{P+0.1013}{0.1013} \times 10^{-6}$$

Q₁ : Required air flow rate for cylinder ℓ /min(ANR)
Q₂ : Air consumption of cylinder ℓ /min(ANR)
D : Cylinder tube inner diameter mm
L : Cylinder stroke mm
t : Time required for cylinder to travel 1 stroke s
n : Number of cylinder reciprocations per minute times/min
P : Pressure MPa

Air flow rate
$$Q_1' = \frac{\pi D'^2}{4} \times L' \times \frac{60}{t} \times \frac{P'+14.696}{14.696} \times \frac{1}{1728}$$

Air consumption
$$Q_2' = \frac{\pi D'^2}{4} \times L' \times 2 \times n \times \frac{P'+14.696}{14.696} \times \frac{1}{1728}$$

Q₁' : Required air flow rate for cylinder ft.³/min.(ANR)*
Q₂' : Air consumption of cylinder ft.³/min.(ANR)*
D' : Cylinder tube inner diameter in.
L' : Cylinder stroke in.
t : Time required for cylinder to travel 1 stroke sec.
n : Number of cylinder reciprocations per minute times/min
P' : Pressure psi.

※ Refer to p.54 for an explanation of ANR.

Air consumption for each 1mm [0.0394in.] stroke cm³ [in.³] /Reciprocation (ANR)

63 [2.480]	12.39 [0.7561]	18.54 [1.1314]	24.70 [1.5073]	30.85 [1.8826]	37.01 [2.2585]	43.16 [2.6338]	49.32 [3.0097]	55.46 [3.3844]	61.57 [3.7572]
80 [3.150]	19.98 [1.2193]	29.90 [1.8246]	39.83 [2.4306]	49.75 [3.0359]	59.67 [3.6413]	69.60 [4.2473]	79.52 [4.8526]	89.45 [5.4586]	99.37 [6.0640]
100 [3.940]	31.21 [1.9046]	46.72 [2.8510]	62.23 [3.7975]	77.73 [4.7434]	93.24 [5.6899]	108.75 [6.6364]	124.25 [7.5822]	139.76 [8.5287]	155.27 [9.4752]
125 [4.921]	48.77 [2.9761]	73.00 [4.4548]	97.23 [5.9334]	121.46 [7.4120]	145.69 [8.8906]	169.92 [10.369]	194.14 [11.847]	218.37 [13.326]	242.60 [14.804]

The figures in the table show the air flow rate and air consumption when an air cylinder makes 1 reciprocation with stroke of 1mm [0.0394in.]. The air flow rate and consumption actually required is found by the following calculations.

- Finding the air flow rate (for selecting F.R.L., valves, etc.)
Example: When operating an air cylinder with bore size of 40mm [1.575in.] at speed of 300mm/s [11.8in./sec.], and under air pressure of 0.5MPa [73psi.]
- $$14.92 \times \frac{1}{2} \times 300 \times 10^{-3} \div 2.24 \ell / s [0.0791 \text{ft.}^3/\text{sec.}] \text{ (ANR)}$$
- (At this time, the air flow rate per minute is $14.92 \times \frac{1}{2} \times 300 \times 60 \times 10^{-3} = 134.28 \ell / \text{min} [4.74 \text{ft.}^3/\text{min.}] \text{ (ANR).}$

- Finding the air consumption
Example 1. When operating an air cylinder with bore size of 40mm [1.575in.] and stroke of 100mm [3.94in.], and under air pressure of 0.5MPa [73psi.], for 1 reciprocation
- $$14.92 \times 100 \times 10^{-3} = 1.492 \ell [0.0527 \text{ft.}^3/\text{Reciprocation (ANR)}$$
- Example 2. When operating an air cylinder with bore size of 40mm [1.575in.] and stroke of 100mm [3.94in.], and under air pressure of 0.5MPa [73psi.], for 10 reciprocations per minute
- $$14.92 \times 100 \times 10 \times 10^{-3} = 14.92 \ell / \text{min} [0.527 \text{ft.}^3/\text{min.}] \text{ (ANR)}$$

Cylinder Thrust

Select a suitable cylinder bore size considering the load and air pressure to obtain the required thrust.

Since the figures in the table are calculated values, select a bore size that results in a load ratio (load ratio = $\frac{\text{Load}}{\text{Calculated value}}$) of 70% or less (50% or less for high speed application).

Bore size mm [in.]	Rod diameter mm [in.]	Operation	Pressure area mm ² [in. ²]	Air pressure MPa [psi.]									N [lbf.]
				0.1 [15]	0.2 [29]	0.3 [44]	0.4 [58]	0.5 [73]	0.6 [87]	0.7 [102]	0.8 [116]	0.9 [131]

Sensor Switch Operating Range, Response Differential, and Maximum Sensing Location

● ZC1□□ type, CS□T type, CS□F type

● Operating range: ℓ

The distance the piston travels in one direction, while the switch is in the ON position.

● Response differential: C

The distance between the point where the piston turns the switch ON and the point where the switch is turned OFF as the piston travels in the opposite direction.

mm [in.]

Sensor switches model	Solid state type	Reed switch type		
	ZC130, ZC153	CS5T	CS11T	CS□F
Operating range: ℓ	2~6 [0.079~0.236]	6~15 [0.236~0.591]		
Response differential: C	1.5 [0.059] MAX.	2.5 [0.098] MAX.		
Maximum sensing location	8.5 [0.335]	7 [0.276]	10.5 [0.413]	16 [0.630]

Notes: 1. Figures in the grommet type are lengths measured from the switch's opposite end side to the lead wire, while the figures in connector type are lengths measured from the connector side's end surface.

2. The above table shows reference values.

Mounting Location of Sensor Switch

When the sensor switch is mounted in the locations shown in the diagram (figures in the table are reference values), the magnet comes to the sensor switch's maximum sensing location at the end of the stroke.

Instructions for Mounting and Moving Sensor Switch

ZC1□□, CS□T types

Requiring parts for mounting 1 sensor switch on a cylinder

- ① Sensor Switch
- ② Washer × 1
- ③ Screw (short) × 1
- ④ Sensor holder × 1
- ⑤ Setscrew × 2
- ⑥ Tie rod
- ⑦ Screw (long) × 1
- ⑧ Sub-holder × 1

1. ● Align the female thread of sensor holder ④ to the position of the sub-holder ⑧'s thru hole, and use a screw (long) ⑦ to assemble.
 - Two thru holes are available for ⑧. Either one can be used.
 - The appropriate tightening torque for ⑦ is 70 N·cm [6.2in·lbf].
2. ● Install the sensor switch ① with the model marking surface facing upward, and fit it on the groove of ⑧.
 - Align the edges of the body ① and indicator lamp (or the cap) to the end plane of ⑧, and assemble. To protect ①, always assemble so that the body ① does not protrude from the end surface of ⑧.
 - The appropriate tightening torque for the screw (short) ③ is 70N·cm [6.2in·lbf].
3. ● Two setscrews ⑤ are temporarily fixed ④ in place.
 - Fit ④ that was assembled with ① and ⑧ onto the tie rod ⑥, and align it to the designated position. Then use an Allen wrench (width across flats B = 2) to tighten ⑤ and secure it in place. Always secure it so that the bottom surface of ⑧ is in contact with the cylinder tube.
 - The appropriate tightening torque for ⑤ is 70 N·cm [6.2in·lbf].
 - There are four ⑥s on the cylinder, and ④ can be installed on any of them. In addition, ④ can be fitted in any direction.
 - Loosening the 2 screws ⑤ allows ④ to be moved freely along ⑥.

DYNA CYLINDERS

CS□F type

Requiring parts for mounting 1 sensor switch on a cylinder

- ① Sensor Switch
- ② Washer × 1
- ③ Screw × 1
- ④ Sensor holder × 1
- ⑤ Setscrew × 2
- ⑥ Tie rod

1. ● For the sensor switch ①, align the female thread of sensor holder ④ to any required location of the ①'s thru hole (oval), and assemble.
 - The appropriate tightening torque for the screw ③ is 70N·cm [6.2in·lbf].
2. ● Use 2 setscrews ⑤ to temporarily fix ④ in place.
 - Fit ④ that was assembled with ① onto the tie rod ⑥, and align it to the designated position. Then use an Allen wrench (width across flats B = 2) to tighten ⑤ and secure it in place. Always secure it so that the bottom surface of ① is in contact with the cylinder tube.
 - To detect the head side end of stroke, mount ① so that the connector wiring port faces toward the head cover side, as shown in the diagram to the left.
 - The appropriate tightening torque for ⑤ is 70N·cm [6.2in·lbf].
 - There are four ⑥s on the cylinder, and ④ can be installed on any of them. In addition, ④ can be fitted in any direction.
 - Loosening the 2 screws ⑤ allows ④ to be moved freely along ⑥.

● Bellows Specifications

Type	Specifications	Contents	Heat resistant temperature °C [°F]
Nylon tarpaulin (standard)		Coating vinyl to nylon cloth	80 [176]
Chloroprene		Coating chloroprene to nylon cloth	100 [212]
Conex		Coating silicone to Conex cloth (no use of asbestos)	200 [392]
Alumix		Coating aluminum foil to asbestos cloth	250 [482]

Note: The temperatures shown are the bellows' own durable temperatures, and are not temperatures for cylinder use.

Order Codes of Mounting Brackets and Knuckles

● Mounting bracket

Cylinder type

- NDDA** — DYNA cylinder
- NDDAR** — DYNA cylinder with brake
- NDDAE** — DYNA pull side stroke adjusting cylinder
- NDDAP** — DYNA push side stroke adjusting cylinder

Mounting bracket

- 1** — Foot mounting type (One set of 2 units)
- 2** — Axial foot mounting type (One set of 2 units)
- 3** — Rod side flange mounting type^{Note}
- 5** — Head side flange mounting type
- 7** — Clevis mounting type (with pin)
- 7-7C** — Clevis mounting type (with supporting bracket)
- 8** — Pivot mounting type
- 11** — Trunnion type
- 11-11T** — Trunnion type (with supporting brackets)

Note: The rod side flange cannot be retrofitted with the bellows type.

Bore size

- 32** — For ϕ 32 [1.260in.]
- 40** — For ϕ 40 [1.575in.]
- 50** — For ϕ 50 [1.969in.]
- 63** — For ϕ 63 [2.480in.]
- 80** — For ϕ 80 [3.150in.]
- 100** — For ϕ 100 [3.940in.]
- 125** — For ϕ 125 [4.921in.]

● Y, I type knuckle

Cylinder type

- NDDA** — DYNA cylinder
- NDDAL** — DYNA non-rotating cylinder

Knuckles

- Y** — Y type knuckle
- I** — I type knuckle

● For dimensions of knuckle, see p.537.

Bore size

- 32** — For ϕ 32 [1.260in.]
- 40** — For ϕ 40 [1.575in.]
- 50** — For ϕ 50 [1.969in.]
- 63** — For ϕ 63 [2.480in.]
- 80** — For ϕ 80 [3.150in.]
- 100** — For ϕ 100 [3.940in.]
- 125** — For ϕ 125 [4.921in.]

Maximum Available Stroke of Cylinder with Bellows
