

More compact than ever

MINI BIT CYLINDERS

Smaller than the current compact Multi Mount Cylinders range offering space-saving mounting.

● **Total length: up to 41% reduction**

● **Volume: up to 67% reduction**

Above data compares the Mini Bit with our standard Multi Mount cylinder without magnet.

New type ZE solid state sensor switch

● Compact

Total length is 15mm [0.591in.] compared to the current 22mm [0.866in.] (ZE235).

● Response differential is reduced to 1/2 that of the current switch. ^{Note}

● Maximum sensing location and electric characteristics are not changed.

Note: According to our in-house test procedure.

Appropriate fittings and tubes are available

Fittings (straight, elbow) and tubes (non-conductive, conductive) for Mini Bit Cylinders are available.

For further details, please see the TAC fittings and Tubes sections in the General Catalog of Air Treatment, Auxiliary, Vacuum (Catalog No. BKUA001).

Handling Instructions and Precautions

General Precautions

Allowable kinetic energy

When carrying an inertial load, operate the cylinder at a kinetic energy at or below the allowable limit.

Bore size	mm [in.]	4.5 [0.177]	6 [0.236]	8 [0.315]	10 [0.394]
Piston speed	m/s [in./sec.]	0.05~0.5 [2~20]			
Allowable kinetic energy	J [ft·lbf]	2.23×10^{-3} [1.64 × 10 ⁻³]	3.96×10^{-3} [2.92 × 10 ⁻³]	7.04×10^{-3} [5.19 × 10 ⁻³]	10.9×10^{-3} [8.04 × 10 ⁻³]

Mounting

When mounting the Mini Bit Cylinder, tighten the bolts within the range of the tightening torque.

● Mini Bit Cylinder mounting

The Mini Bit Cylinder can be mounted in two directions.

1. Mounting using the through holes on the body

Cylinder with magnet

Standard cylinder

(Note: Do not use magnetic materials for the mounting bracket of the cylinder with magnet.)

Model	Bolt	Maximum tightening torque N·m [in·lbf]	A dimension mm [in.]	A' dimension mm [in.]

MB□A(S) 10	M2.5×0.45	0.58 [5.13]	9 [0.354]	5.5 [0.217]

2. Mounting by using bolts in the axial direction

Model	Bolt	Maximum tightening torque N·m [in·lbf]	B dimension mm [in.]
MB□A(S) 4.5	M2.5×0.45	0.32 [2.83]	3 [0.118]

MB□A(S) 10	M3×0.5	0.59 [5.22]	4 [0.157]

Piping

1. Always thoroughly blow off (use compressed air) the tubing before connecting it to the Mini Bit Cylinder. Entering chips, sealing tape, rust, etc., generated during piping work could result in air leaks or other defective operation.
2. Observe the following tightening torques when screwing piping or fittings into the Mini Bit Cylinder ports.

Connecting thread	Tightening torque N·m [in·lbf]
M3×0.5	0.59 [5.22]

Media

1. Use air for media. For the use of any other media, consult us.
2. For the air used in the cylinder, use clean air that does not contain deteriorated compressor oil. Install a filter (filtration rating of a minimum 40 μm) near the cylinder or valve to remove collected liquid or dust. Also, clean out the collected liquid of the air filter on a regular basis. Letting liquid or dust inside the cylinder could result in defective operation.

Lubrication

This product can be used without lubrication, if lubrication is required, use Turbine Oil Class 1 (ISO VG32) or equivalent. Avoid using spindle oil or machine oil.

Atmosphere

If using in locations subject to dripping water, dripping oil, etc., use a cover to protect the unit.

SENSOR SWITCHES

Solid State Type

Moving Sensor Switch

- Loosen the set screw, slide the sensor switch along the switch mounting groove on the Mini Bit Cylinder.
- Tighten the set screw with a tightening torque of 0.1N·m~0.2N·m [0.9 in·lbf~1.8 in·lbf]

When Mounting Sensor Switches in Close Proximity

If using the actuators in close proximity, use at the values shown in the table below, or larger.

If mounting a sensor switch in the positions shown in the diagram below (figures in the table are reference values), the magnet comes to the maximum sensing location of the sensor switch at the end of stroke.

Sensor Switch Operating Range, Response Differential, and Maximum Sensing Location

● Operating range: ℓ

The distance the piston travels in one direction, while the switch is in the ON position.

● Response differential: C

The distance between the point where the piston turns the switch ON and the point where the switch is turned OFF as the piston travels in the opposite direction.

Operating range: ℓ		1.6~2.8 [0.063~0.110]	1.8~3.0 [0.071~0.118]	1.8~3.0 [0.071~0.118]	2.0~3.2 [0.079~0.126]
Response differential: C		0.2 [0.008] or less			
Maximum sensing location	Note	6 [0.236]			

Remark: The above table shows reference values.

Note: This is the length measured from the switch's opposite end side to the lead wire.
