

## Multi-channel Flow Rate Sensor Controller FSU

**Owner's Manual** Ver. 2.0

Thank you very much for purchasing Koganei Multi-channel Flow Rate Sensor Controller. Please read this Owner's Manual carefully and thoroughly for the correct and optimum use of the pressure switch. Kindly keep this manual in a convenient place for quick reference.

**⚠ This product is intended for detection of targeted objects, and does not have control functions for the purposes of accident prevention or other safety measures.**

### 1 Specifications

#### ● Multi-channel flow rate sensor controller

| Item           |  | Model | FSU  |
|----------------|--|-------|--|
| Power supply   | Voltage  |       | DC24V±10%  |
|                | Sensor head supply voltage                     |       | DC24V±10% <sup>Note 1</sup>  |
|                | Consumption current                            |       | 100mA MAX. (Not including current supplied to sensor)  |
| Sensor input   | Compatible sensor heads                        |       | Rated flow rate<br>• -500~500 mℓ/min (ANR) type<br>• -3~3 ℓ/min (ANR) type<br>• 0~10 ℓ/min (ANR) type  |
|                | Number of connectable sensors                  |       | 1~4  |
|                | Input voltage range                            |       | DC1.0~5.0V   |
|                | Maximum input voltage                          |       | 5.3V MAX.  |
|                | Number of outputs                              |       | 4  |
| SW output      | Output method                                  |       | NPN open collector   |
|                | Response time                                  |       | 3ms  |
|                | Load voltage                                   |       | DC30V MAX.   |
|                | Load current                                   |       | 50mA MAX.  |
|                | Internal voltage drop                          |       | 0.3V MAX./at load current 5mA  |
|                | Output mode                                    |       | Window comparator mode 1 Window comparator mode 3<br>Window comparator mode 2 Window comparator mode 4 |
|                | Switch output reversal                         |       | Compatible with window comparator mode 4 only  |
| Display        | Hysteresis                                     |       | Variable (Can be freely set at 2 digits or more)   |
|                | Flow rate display                              |       | 7-segment LED, 3-digit display   |
|                | Switch output display (SW.OUT)                 |       | Red LED lights up when ON  |
| Setting method | Flow rate display channel indication (A.S.OUT) |       | Flow rate display channel green LED lights up  |
|                | Body key setting                               |       | ⏏: UP, ⏏: DOWN, ⏏: MODE  |
| General        | External setting (option) <sup>Note 2</sup>    |       | Conforms with RS232C   |
|                | Operating temperature range                    |       | -10~50°C (storage: -20~80°C, no condensation and freezing)   |
|                | Noise resistance                               |       | IEC61000-4-4<br>Power supply line: 1KV (level 2)<br>Sensor input signal line: 1KV (level 3)            |
|                | Dielectric strength                            |       | AC500V 1 minute  |
|                | Insulation resistance                          |       | 100MΩ min. (at DC500V megger)  |
|                | Vibration resistance                           |       | 88.3m/s <sup>2</sup> (total amplitude 1.5mm, 10~55Hz)  |
|                | Shock resistance                               |       | 294.2m/s <sup>2</sup> (Non-repeated shock)   |
|                | Material                                       |       | Case: PBT  |
|                | Mass   |       | 45g (excluding cable)  |

Notes: 1. The supply voltage to the sensor head is lower by 0.5V MAX than the controller power supply voltage.  
2. FSU-S-D-□-□ only.

### 2 General precautions

#### Wiring

- If power is supplied from a commercial switching regulator, ensure that the frame ground (F.G.) terminal of the power supply is connected to an actual ground.
- In case noise generating equipment (switching regulator, inverter motor, etc.) is used in the vicinity of sensor mounting portion, connect the frame ground (F.G.) terminal of the equipment to an actual ground.
- When wiring is completed, check that there is no error in the wiring connections.

#### Others

- Sensor head is designed for use with non-corrosive gas. It cannot be used for liquid or corrosive gas.
- Use within the rated pressure range.
- Do not use during the initial transient time (0.5 sec.) after the power supply is switched on.
- Do not operate the keys with pointed or sharp objects.
- When using window comparator mode 2 in operations that involve repeated utilization of the reference flow rate, the guaranteed number of times may be exceeded in a short period of time. In such cases, use window comparator mode 3.
- If using with window comparator mode 3, use FSU-S-D.

### 1 Specifications

#### ● Flow rate sensor heads

| Item                                       |  | Model | FS-R3   | FS-R05                 | FS-10   |
|--|--|-------|---|------------------------|---|
| Gases targeted for measurement             |  |       | Air/nitrogen. However, the detection media cannot contain chlorine, sulfur, acid, or other corrosive substances. Gas must also be dry.<br>Gas must be clean gas devoid of dust or mist (oil mist).  |                        |   |
| Measurement flow rate range                |  |       | -3~+3 ℓ/min   | -500~+500 mℓ/min       | 0~+10 ℓ/min   |
|  |  |       | Converted volume flow rate at 20°C, 1atm  |                        |   |
| Response                                   |  |       | 5ms or less (95% response to stepped changes in flow rate)  |                        |   |
| Output signal                              |  |       | DC1~5V (nonlinear characteristics), Allowable load resistance 10kΩ or more  |                        |   |
| Operating temperature range                |  |       | 0~50°C (For both ambient temperature and measured media temperature)  |                        |   |

| Power supply voltage                       |  |       | DC24V (Supplied from sensor controller)   |                        |   |
| Allowable voltage fluctuation range        |  |       | In the DC21.6~26.4V range, ±2%FS or less in relation to output value at DC24V <sup>Note 2</sup>   |                        |   |
| Output stabilization time                  |  |       | Time required to come within ±5%FS of final attained voltage (flow rate): Instantaneous<br>Time required to come within ±1%FS of final attained voltage (flow rate): Within 10 sec.   |                        |   |
| Consumption current                        |  |       | 12mA MAX.   |                        |   |
| Dielectric strength                        |  |       | Between all external connector terminals and body: AC500V for 1 min., or AC600V for 1 sec.  |                        |   |
| Insulation resistance                      |  |       | Between all external connector terminals and body: 50MΩ (at DC500V megger)  |                        |   |
| Connection method                          |  |       | M5 female thread (brass insertion), tightening torque at 2.5N·m or less   |                        |   |
| Material                                   |  |       | Gas contact part: PPS plastic (flow path body), ceramic (substrate), brass (connections)<br>Cover part: PC plastic (polycarbonate)  |                        |   |
| Mounting direction                         |  |       | Any direction except where cover part faces downward  |                        |   |
| Mounting conditions                        |  |       | When using the mounting holes on this device, use M3 screws and a tightening torque of 0.6N·m or less.<br>In addition, install a filter upstream from the device that is capable of collecting dust and mist particles of 10μm or larger. |                        |   |
| Straight piping length                     |  |       | Unnecessary either upstream or downstream from the device   |                        |   |
| Vibration resistance                       |  |       | 10~55Hz, total amplitude 1.5mm, XYZ directions each 2 hours   |                        |   |
| Mass                                       |  |       | 9g  |                        |   |
| Electrical connection (special connectors) |  |       | Cable with dedicated connector<br>Flow rate sensor heads side: SM03B-SRSS-G-TB made by JST Mfg. Co., Ltd.<br>Mating side: SHR-03V-S-B (housing), SSH-003GA-P0.2 (contact) made by JST Mfg Co., Ltd.                                       |                        |   |

Notes 1: The %FS in the table assumes full-scale output voltage of 4V (1-5V).

2: Near the upper limit of the measurement flow rate range, output fluctuation after flow rate stabilization can be generated up to a maximum of ±1%FS (amount of drift 500 seconds after flow rate stabilization).

Note: FSU-S-D-□-□ only.

### 3 Mounting

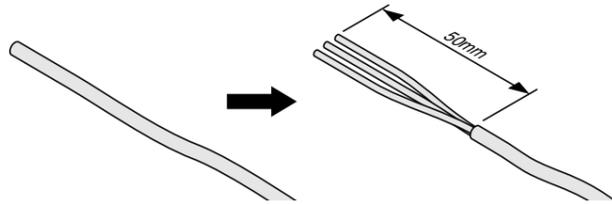

#### Sensor head and connector connection procedure

When the sensor head FSU-□-□ is supplied, the sensor head body and mini clamp connector (male) are not yet connected. Follow the procedure below to perform the connection.

1. Check that the connector cover (the part where lead wires are to be inserted) is protruding from the connector body.

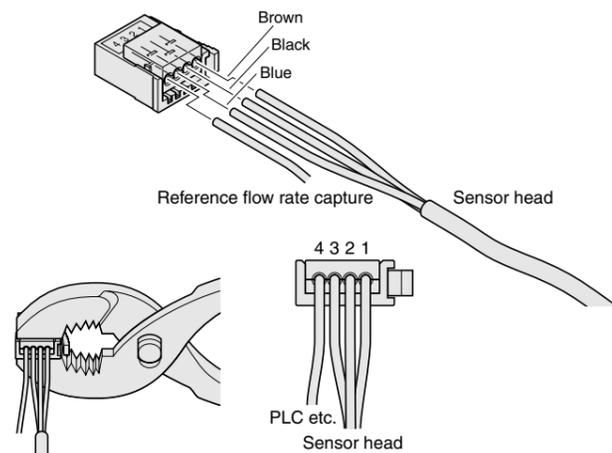

2. Cut the cable at the length required for the sensor head. Strip off the cable sheath for 50mm from the cable end, and expose the lead wires. At this time, do not take off the lead wire insulation.

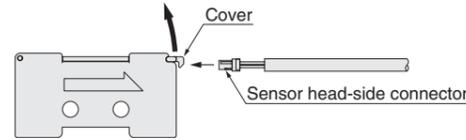

3. Follow the instructions in the table to insert the lead wires into the hole in the connector cover. Look through the top of the semi-transparent cover to check that the lead wires have been firmly inserted all the way to the back. (Insertion length is about 9mm.) Use caution in making the connections, since switching on the power with wrong connections will damage the sensor head and controller.

| No. on the connector | Signal name                   | Color of lead wire  |
|----------------------|-------------------------------|---|
| 1                    | Sensor head power supply (+)  | Sensor head brown wire  |
| 2                    | Sensor head voltage output    | Sensor head black wire  |
| 3                    | Sensor head power supply (0V) | Sensor head blue wire   |
| 4                    | Reference flow rate capture   | Prepared by customer<br>AWG 24-26 (0.14-0.3sq)<br>Insulation diameter:<br>φ 0.8-1.0mm |

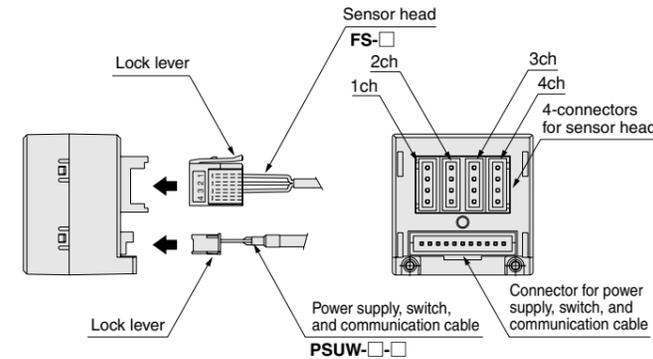

4. Taking care to avoid letting the lead wires slip out from the connector, use pliers or some other hand tool to crimp the cover and connector body, and push the cover into the connector body. Limit the crimping force to 980.7N. When the cover is flat and placed at the same level against the connector body, the connection is complete.
5. In the same way, handle the sensor head relay cable PSUK-□ mini-clamp connectors (male, female).
6. Check one more time that the wiring is correct.

7. On the sensor head body, connect the sensor head-side connector. Open the sensor head cover, connect the connector and then close the cover.

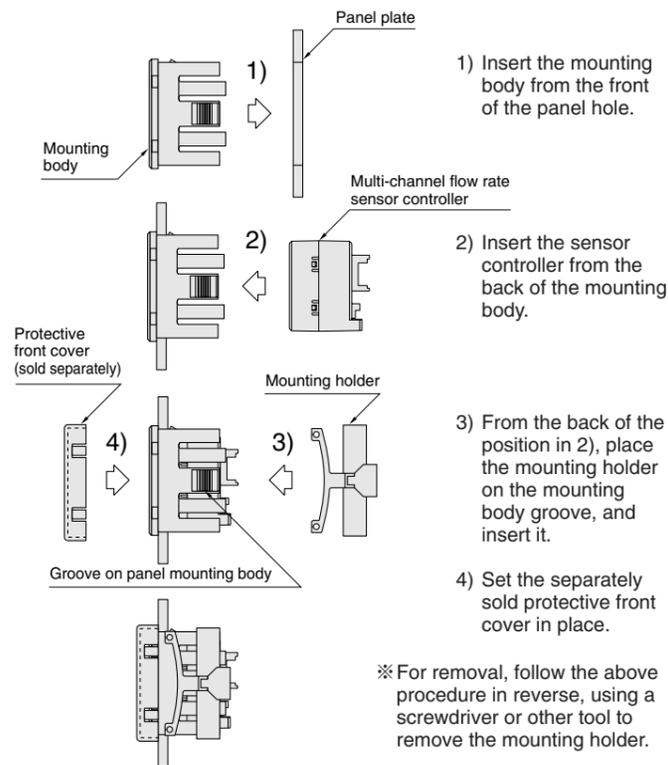

#### Attaching and removing of the sensor head, and the power supply, switch, and communication cable

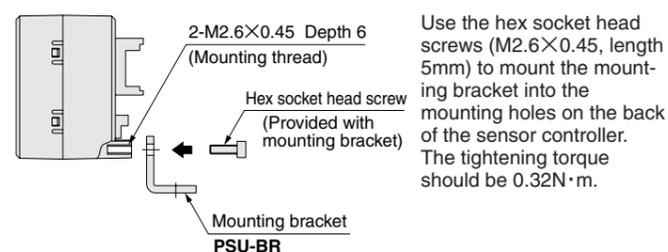

To mount the sensor head and the power supply, switch, and communication cable, align the lock lever position as shown in the figure, and push until the lock hooks on the controller-side connector. To remove, push down hard on the lock lever, take the connector and pull it out. At this time, be careful to avoid applying excessive force on the lead wires.

#### Attaching the panel mounting parts and protective front cover

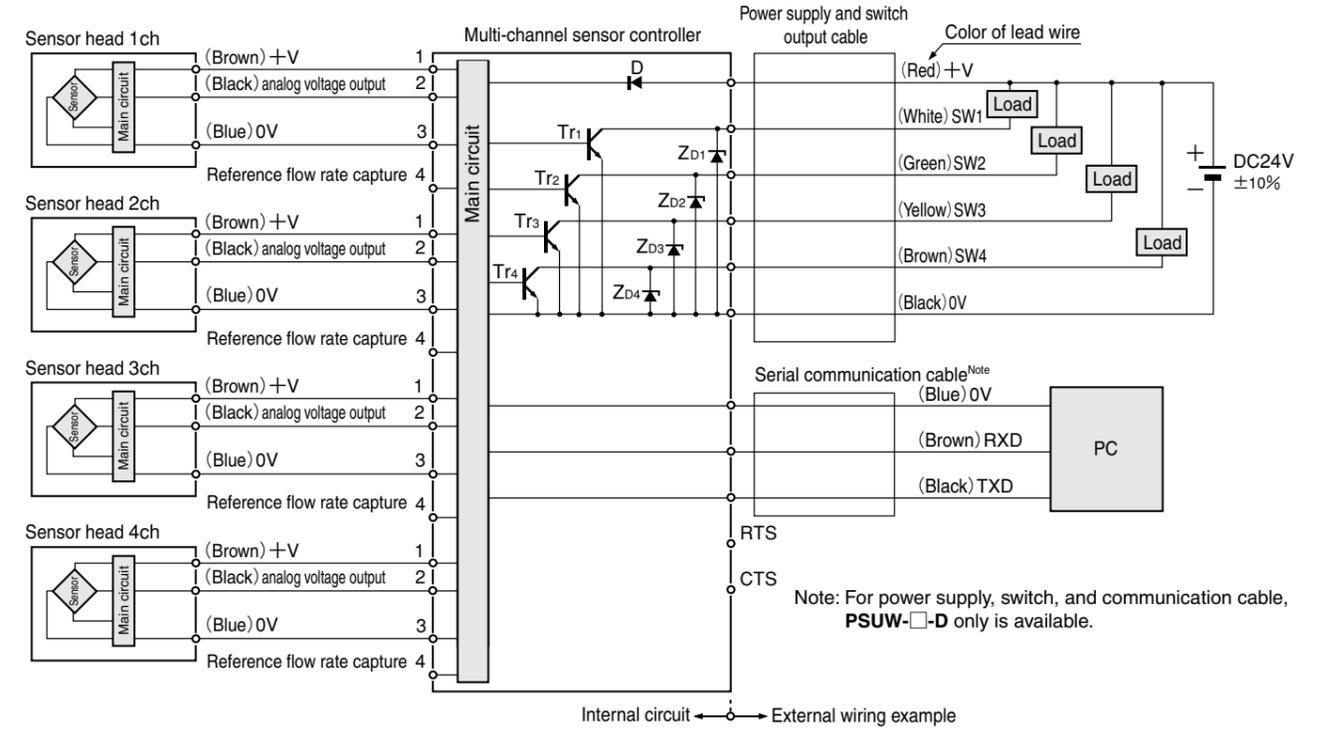

※ For removal, follow the above procedure in reverse, using a screwdriver or other tool to remove the mounting holder.

#### Attaching the mounting bracket

Use the hex socket head screws (M2.6×0.45, length 5mm) to mount the mounting bracket into the mounting holes on the back of the sensor controller. The tightening torque should be 0.32N·m.

### 4 Internal Circuit Diagrams and Wiring Specifications (External Wiring Example)

Note: For power supply, switch, and communication cable, PSUW-□-D only is available.

Note: Be aware that voltage drops as cable resistance increases when extending the cable.

|         |   |
|---------|---|
| Code D  | : Diode for reverse connecting protection of power supply |
| ZD1~ZD4 | : Zener diode for surge voltage absorption                |
| Tr1~Tr4 | : NPN output transistor                                   |

### 5 Major parts and functions

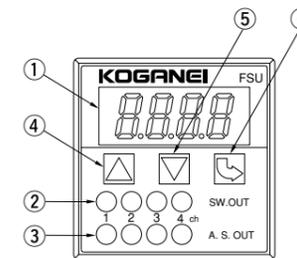

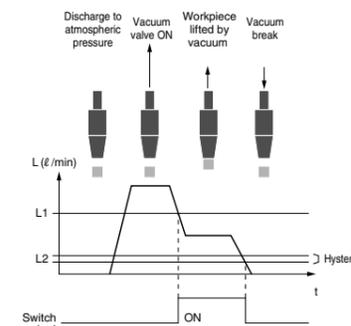

Figure 1

| No. | Name                          | Description   |
|-----|-------------------------------|---|
| ①   | LED display (red)             | Displays the detected electric potential value, setting contents, and error content |
| ②   | Switch output indicator (red) | Lights up when switch output is ON  |
| ③   | Autoscan indicator (green)    | The channel whose current flow rate is displayed on the LED lights up               |
| ④   | UP key (▲)                    | Used when adjusting setting value upward  |
| ⑤   | DOWN key (▼)                  | Used when adjusting setting value downward  |
| ⑥   | Mode key (⏏)                  | Used for all types of settings  |

### 6 Output Mode

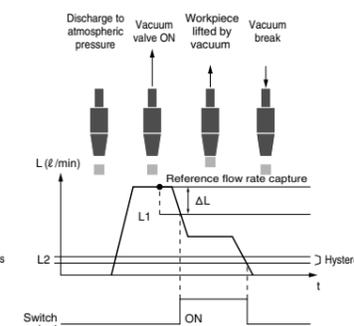

#### ● Window comparator mode 1

Mode for freely setting L1 and L2. Note, however, that switch output does not go ON while flow rate is increasing.

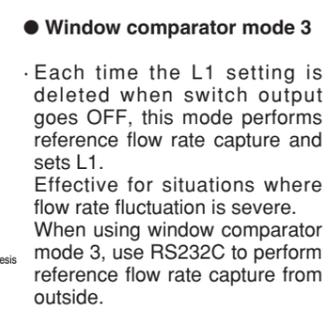

#### ● Window comparator modes 2 and 3

Modes for automatically setting L1, using ΔL setting and reference flow rate capture. (L1 = Reference flow rate - ΔL)

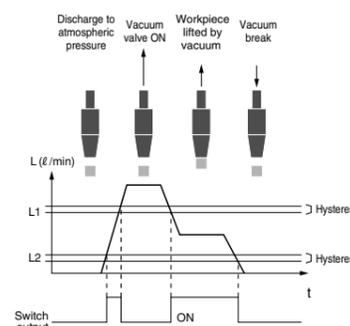

#### ● Window comparator mode 2

When L1 has been set, this mode maintains it unchanged until reference flow rate capture is performed again.

#### ● Window comparator mode 4

Mode for freely setting L1 and L2.

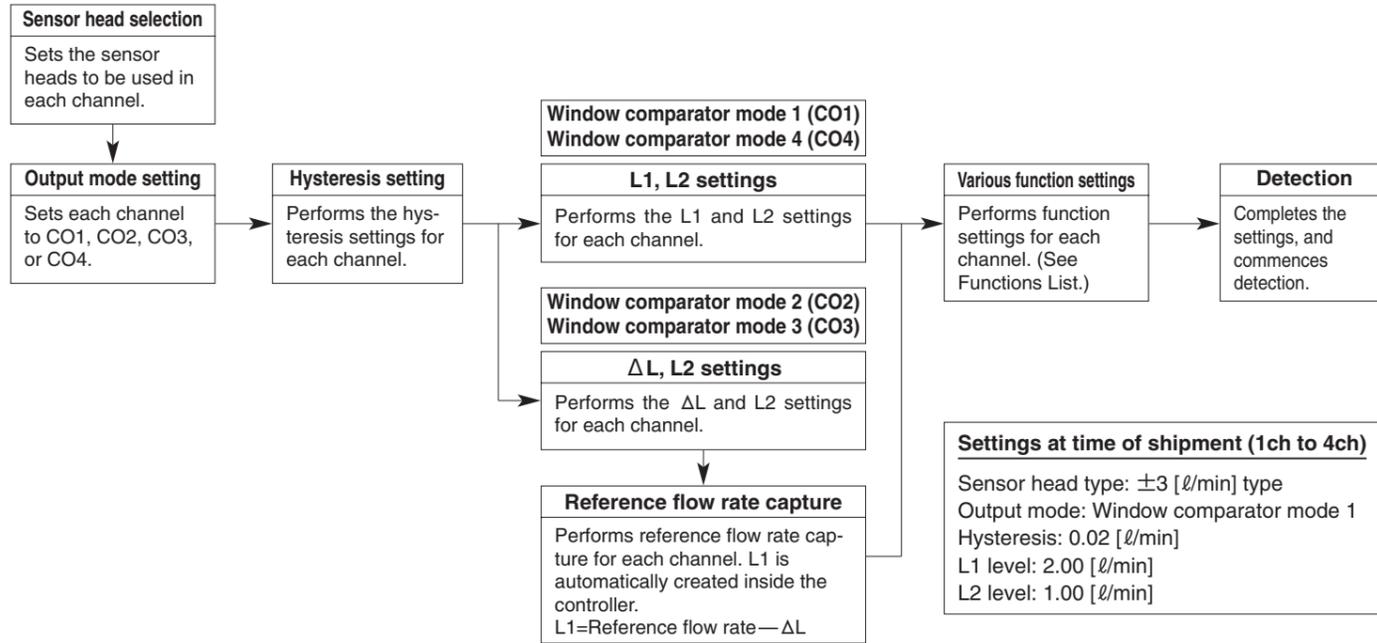

## 7 Setting

### Caution

- Since miswiring in the sensor head, or in the power supply, switch, and communication cable, can damage both the controller and sensor head, always check the wiring before switching on the power.
- The setting conditions are written to EEPROM and saved. Be aware that EEPROM has a finite lifetime, with guaranteed number of times up to 100,000 times.
- When using window comparator mode 2 in operations that involve repeated reference flow rate capture, the EEPROM guaranteed number of times may be exceeded in a short period of time. In such cases, use window comparator mode 3.
- In this manual, window comparator mode 1 is called by code: CO1, window comparator mode 2 by code: CO2, window comparator mode 3 by code: CO3, and window comparator mode 4 by code: CO4.

### Setting procedure

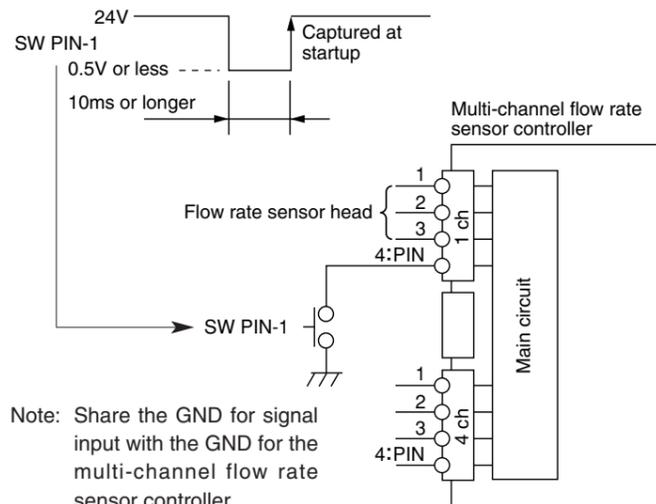

### Setting

#### Reference flow rate capture method in window comparator modes 2 and 3

|                                  |                                     |
|----------------------------------|-------------------------------------|
| Device key operation method      | For the operations method, see p.10 |
| RS232C method                    | For RS232C commands, see p.10       |
| General-purpose I/O input method | See diagram below                   |

#### Reference flow rate capture method using general-purpose I/O input

Set PIN (sensor head connector 4-pin) for corresponding channel to "L level" (0.5V or less, 10ms or longer).

Note: Share the GND for signal input with the GND for the multi-channel flow rate sensor controller.

If not using general-purpose I/O input to perform reference flow rate capture, do not connect anything to the PIN. (Note: PIN is pulled up at 24V.)

### Setting preparation

- Connect the connectors to the sensor heads. (See p.10 for the connection procedure for the sensor head connectors.)
- Connect the sensor heads (1 to 4 pcs.) and the power supply, switch, and communication cable to the controller. (See p.10 for attaching and removing of the sensor head and the power supply, switch, and communication cable.)

### Detection mode

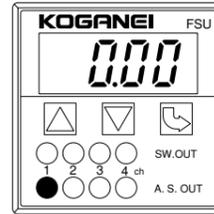

Figure 2

- Switching on the power supply (DC24V voltage) automatically provides detection mode.
- The flow rate of the selected channel is indicated in the LED display. (The selected channel's A.S.OUT LED (green) lights up. See Figure 2.)
- The SW.OUT LED (red) lights up when the switch output is turned ON.
- Pressing the  $\Delta$  key or  $\nabla$  key changes the selected channel.
- If the  $\overline{OFF}$  display appears, it means that the selected channel's sensor head was not connected or has a wire break.
- In the case of a wire break, shut off the power and replace the sensor head.

### Sensor head selection

Use the following procedure to perform settings for the sensor head used in each channel.

| Procedure | Device operation                               | 7-seg display | Remarks  |
|-----------|--|---------------|--|
| 1         | $\Delta$                                       | SE1 1         |  |
| 2         | $\nabla$                                       | SE1           |  |
| 3         | $\Delta$ $\nabla$ (Push both at the same time) | CH 1          | Use $\Delta$ or $\nabla$ to select channel     |
| 4         | $\Delta$ $\nabla$ (Push both at the same time) | SE 1          | Use $\Delta$ or $\nabla$ to select sensor head |
| 5         | $\Delta$ $\nabla$ (Push both at the same time) |               | Sensor head determined                         |

Note: SE2 and SE4 cannot be used.

[Sensor head selection]  
SE1: -3.00 to 3.00:  $\pm 3\ell$  type  
SE2: Cannot be used  
SE3: -500 to 500:  $\pm 500$  ml type  
SE4: Cannot be used  
SE5: 0.00 to 10.00: 10  $\ell$  type

### Output mode selection

Use the following procedure to perform output mode settings for each channel.

| Procedure | Device operation                               | 7-seg display | Remarks  |
|-----------|--|---------------|--|
| 1         | $\Delta$                                       | SE1 1         |  |
| 2         | $\nabla$                                       | SE1           |  |
| 3         | $\Delta$ $\nabla$ (Push both at the same time) | REF 1         | Use $\Delta$ or $\nabla$ to select channel     |
| 4         | $\Delta$ $\nabla$ (Push both at the same time) | CO 1          | Use $\Delta$ or $\nabla$ to select output mode |
| 5         | $\Delta$ $\nabla$ (Push both at the same time) |               | Output mode determined                         |

[Output mode selection]  
CO1: Window comparator mode 1  
CO2: Window comparator mode 2  
CO3: Window comparator mode 3  
CO4: Window comparator mode 4

### Hysteresis setting

Use the following procedure to change the hysteresis for each channel.

| Procedure | Device operation                               | 7-seg display | Remarks  |
|-----------|--|---------------|--|
| 1         | $\Delta$                                       | SE1 1         |  |
| 2         | $\nabla$                                       | SE1 2         |  |
| 3         | $\Delta$ $\nabla$ (Push both at the same time) | SE1           |  |
| 4         | $\Delta$ $\nabla$ (Push both at the same time) | HYS 1         | Use $\Delta$ or $\nabla$ to select channel             |
|           | $\Delta$ $\nabla$ (Push both at the same time) | 0.00 2        | Use $\Delta$ or $\nabla$ to perform hysteresis setting |
| 5         | $\Delta$ $\nabla$ (Push both at the same time) |               | Hysteresis determined                                  |

[Hysteresis selection]  
HYS1: 1ch  
HYS2: 2ch  
HYS3: 3ch  
HYS4: 4ch  
To prevent chattering, set hysteresis to 2 digits or more.

### Threshold setting (L1 ( $\Delta$ L)/L2 setting)

Use the following procedure to perform threshold settings for each channel.

| Procedure | Device operation                               | 7-seg display | Remarks                                    |
|-----------|--|---------------|--|
| 1         | $\Delta$                                       | SE1 1         |  |
| 2         | $\nabla$                                       | SE1           |  |
| 3         | $\Delta$ $\nabla$ (Push both at the same time) | 1 1           | Use $\Delta$ or $\nabla$ to select channel |
| 4         | $\Delta$ $\nabla$ (Push both at the same time) | * * *         | Use $\Delta$ or $\nabla$ to set threshold  |
| 5         | $\Delta$ $\nabla$ (Push both at the same time) |               | Threshold determined                       |

[Threshold setting]  
11: 1ch\_L1/ $\Delta$ L  
12: 1ch\_L2  
21: 2ch\_L1/ $\Delta$ L  
22: 2ch\_L2  
31: 3ch\_L1/ $\Delta$ L  
32: 3ch\_L2  
41: 4ch\_L1/ $\Delta$ L  
42: 4ch\_L2

### Reference flow rate capture (for window comparator modes 2 and 3)

When using window comparator mode 2 or 3, use the following procedure to perform reference flow rate capture.

| Procedure | Device operation                               | 7-seg display | Remarks                                    |
|-----------|--|---------------|--|
| 1         | $\Delta$                                       | SE1 1         |  |
| 2         | $\nabla$                                       | SE1           |  |
| 3         | $\Delta$ $\nabla$ (Push both at the same time) | REF 1         | Use $\Delta$ or $\nabla$ to select channel |
| 4         | $\Delta$ $\nabla$ (Push both at the same time) |               | Reference flow rate captured               |

[Reference flow rate capture]  
REF1: 1ch  
REF2: 2ch  
REF3: 3ch  
REF4: 4ch

### Flow rate display switch-off

Use the following procedure to switch off the flow rate display.

| Procedure | Device operation                               | 7-seg display | Remarks              |
|-----------|--|---------------|----------------------|
| 1         | $\Delta$                                       | SE1 1         |                      |
| 2         | $\nabla$                                       | SE1 2         |                      |
| 3         | $\Delta$ $\nabla$ (Push both at the same time) | SE1           |                      |
| 4         | $\Delta$ $\nabla$ (Push both at the same time) |               | 7-seg LED off        |
| 5         | $\Delta$ $\nabla$ (Push both at the same time) | * * *         | 7-seg LED re-lighted |

### Flow rate display autoscan

Use the following procedure to switch the flow rate display to autoscan mode. Since autoscan mode is combined with the key lock function, no key operation other than cancellation of autoscan can be performed.

| Procedure | Device operation                               | 7-seg display | Remarks        |
|-----------|--|---------------|----------------|
| 1         | $\Delta$                                       | SE1 1         |                |
| 2         | $\nabla$                                       | SE1 2         |                |
| 3         | $\Delta$ $\nabla$ (Push both at the same time) | SE1           |                |
| 4         | $\Delta$ $\nabla$ (Push both at the same time) |               | Autoscan start |
| 5         | $\Delta$ $\nabla$ (Push both at the same time) |               | Autoscan stop  |

Note: Autoscan mode is cancelled when the power supply is switched OFF.

### Switch output reversal (enabled for window comparator mode 4 only)

Use the following procedure to reverse the switch output for each channel.

| Procedure | Device operation                               | 7-seg display | Remarks                                    |
|-----------|--|---------------|--|
| 1         | $\Delta$                                       | SE1 1         |  |
| 2         | $\nabla$                                       | SE1 2         |  |
| 3         | $\Delta$ $\nabla$ (Push both at the same time) | SE1 3         |  |
|           | $\Delta$ $\nabla$ (Push both at the same time) | SE1           |  |
| 4         | $\Delta$ $\nabla$ (Push both at the same time) | CH 1          | Use $\Delta$ or $\nabla$ to select channel |
|           | $\Delta$ $\nabla$ (Push both at the same time) | S-O           | Use $\Delta$ or $\nabla$ to set            |
| 5         | $\Delta$ $\nabla$ (Push both at the same time) |               | Output mode determined                     |

Note: Cannot be used with any mode other than window comparator mode 4.

[Switch output reversal]  
S-O: Not reversed (A-contact)  
S-1: Reversed (B-contact)

### Zero point correction (Zero reset)

Use the following procedure to perform zero point correction for each channel.

| Procedure | Device operation                               | 7-seg display | Remarks                                    |
|-----------|--|---------------|--|
| 1         | $\Delta$                                       | SE1 1         |  |
| 2         | $\nabla$                                       | SE1 2         |  |
| 3         | $\Delta$ $\nabla$ (Push both at the same time) | SE1 3         |  |
| 4         | $\Delta$ $\nabla$ (Push both at the same time) | SE1           |  |
| 5         | $\Delta$ $\nabla$ (Push both at the same time) | b-1           | Use $\Delta$ or $\nabla$ to select channel |
| 6         | $\Delta$ $\nabla$ (Push both at the same time) |               | Zero point correction                      |

Note: Zero point is cancelled when the power supply is switched OFF.

[Zero point correction]  
b-1: 1ch  
b-2: 2ch  
b-3: 3ch  
b-4: 4ch

## Peak hold and bottom hold

Use the following procedure to put the flow rate display on peak hold or bottom hold. The display channel can be switched back and forth while in hold position.

| Procedure | Peak hold                        | 7-seg display | Bottom hold                      | 7-seg display | Remarks     |
|-----------|----------------------------------|---------------|----------------------------------|---------------|-------------|
| 1         |                                  | SEF1          |                                  | SEF1          |             |
| 2         |                                  | SEF2          |                                  | SEF2          |             |
| 3         |                                  | SEF3          |                                  | SEF3          |             |
| 4         |                                  | SEF4          |                                  | SEF4          |             |
| 5         |                                  | SEF           |                                  | SEF           |             |
| 6         | <br>(Push both at the same time) | PHL           | <br>(Push both at the same time) | bHL           | Hold start  |
| 7         | <br>(Push both at the same time) |               | <br>(Push both at the same time) |               | Hold cancel |

Note: Peak hold and bottom hold are cancelled when the power supply is switched OFF. Peak hold and bottom hold cannot be implemented at the same time.

## 9 Communication with personal computer

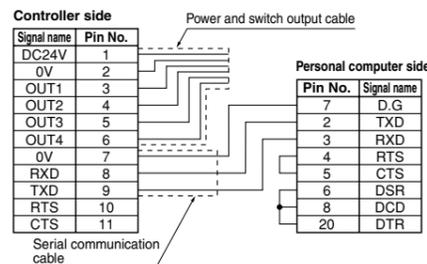

**Hardware and operations environment**  
 PC: PC-98 series (excluding PC-98LT) or equivalent DOS/V machine  
 OS: Windows95 or later

**Software and operations environment**  
 Hyperterminal with WIndows95 or later as the standard.  
 ※Windows is a registered trademark of Microsoft Corp.

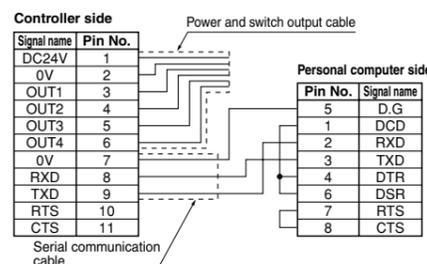

### Communication parameter

|                           |                  |
|---------------------------|------------------|
| Baud rate                 | 9600 (baud)      |
| Stop bit length           | 1[bit]           |
| Parity                    | Odd              |
| Parity check              | Yes              |
| Data bit length           | 8[bit]           |
| Communication method      | Full duplex      |
| Return key send procedure | CR code, LF code |

### Communication cable specification and connection

D-sub 25 pin configuration

D-sub 9 pin configuration

## 8 Error Display

|         | Error description  | Error cancel   |
|---------|--|--|
| OFF     | Sensor head on selected channel either not connected or has a wire break.        | In the case of a wire break, shut off the power and replace the sensor head. |
| E-1     | In window comparator modes 2 and 3, threshold is set outside the measured range. | Correct the error, and then press the mode key  for at least 1 second.       |
| E-2 [n] | Overvoltage (5V or more) applied to sensor input (AN0 to AN3).                   |  |
| E-3 [n] | Overcurrent flowing to switch output.  |  |

### Communication command detail

**Command List** Note: “\_” denotes a space.

**@A**  
 Function: Reads out the current flow rate value (1ch-4ch).  
 Send example: @A c/r/f  
 Response example: 1 = -3.00 c/r/f  
 2 = -3.00 c/r/f  
 c/r/f ← When sensor head is not connected  
 4 = 0.00 c/r/f  
 c/r/f  
 Response example: NG c/r/f  
 21: illegal type

**@PRE**  
 Function: Sets the ON and OFF points for each channel.  
 Send example: @PRE11\_ -3.00 c/r/f  
 Response example: OK c/r/f  
 Response example: NG c/r/f  
 21: illegal type

@PRE11: Sets L1/ΔL for Channel 1  
 @PRE12: Sets L2 for Channel 1  
 @PRE21: Sets L1/ΔL for Channel 2  
 @PRE22: Sets L2 for Channel 2  
 @PRE31: Sets L1/ΔL for Channel 3  
 @PRE32: Sets L2 for Channel 3  
 @PRE41: Sets L1/ΔL for Channel 4  
 @PRE42: Sets L2 for Channel 4

 Always input 1

**@P**  
 Function: In output mode, the reference flow rate capture when comparator modes 2 and 3 are selected.  
 Send example: @P c/r/f  
 Response example: OK c/r/f  
 Response example: NG c/r/f  
 21: illegal type

@P1: Channel 1 reference value setting  
 @P2: Channel 2 reference value setting  
 @P3: Channel 3 reference value setting  
 @P4: Channel 4 reference value setting

@P1  
 ↑ ↑ ↑ ↑  
 1: 1CH  
 2: 2CH  
 3: 3CH  
 4: 4CH

**@MODE**  
 Function: Sets the output mode for each channel.  
 Send example: @MODE1\_1c/r/f  
 Response example: OK c/r/f  
 Response example: NG c/r/f  
 21: illegal type

@MODE1\_1

 2: Window comparator mode 2  
 3: Window comparator mode 3  
 4: Window comparator mode 4

**@TYPE**  
 Function: Sets the sensor head type for each channel.  
 Send example: @TYPE1\_1c/r/f  
 Response example: OK c/r/f  
 Response example: NG c/r/f  
 21: illegal type

@TYPE1\_1  
 ↑ ↑ ↑ ↑  
 1: 1CH  
 2: 2CH  
 3: 3CH  
 4: 4CH  
 1: -3.00~3.00  
 2: Cannot be used  
 3: -500~500  
 4: Cannot be used  
 5: 0.00~10.00

**@INV** (Enabled for window comparator mode 4 only)  
 Function: Sets switch output reversed/not reversed.  
 Send example: @INV1\_0c/r/f  
 Response example: OK c/r/f  
 Response example: NG c/r/f  
 21: illegal type

@INV1\_0  
 ↑ ↑  
 1: 1CH

 4: Cannot be used  
 5: 0.00~10.00

**@C**  
 Function: Displays the L1 (ΔL) and L2 points for each channel.  
 Send example: @C1 c/r/f  
 Response example: 1.00 c/r/f ←L1 (ΔL)  
 0.50 c/r/f ←L2  
 c/r/f  
 Response example: NG c/r/f @C1  
 21: illegal type  
 1: 1CH  
 2: 2CH  
 3: 3CH  
 4: 4CH

**@E**  
 Function: Displays L1 = Reference flow rate—ΔL, and L2 for each channel.  
 Send example: @E1 c/r/f  
 Response example: 1.00 c/r/f ←L1 = Reference flow rate—ΔL  
 0.50 c/r/f ←L2  
 c/r/f  
 Response example: NG c/r/f @E1  
 21: illegal type  
 1: 1CH  
 2: 2CH  
 3: 3CH  
 4: 4CH

**@DIS**  
 Function: Switches off (Locks) the main body LED.  
 Send example: @DIS\_1 c/r/f  
 Response example: OK c/r/f  
 Response example: NG c/r/f  
 21: illegal type

@DIS\_1  
 ↑  
 1: Not lighted  
 0: Lighted

**@AS**  
 Function: Sets ON/OFF for autoscan function.  
 Send example: @AS\_1 c/r/f  
 Response example: OK c/r/f  
 Response example: NG c/r/f  
 21: illegal type

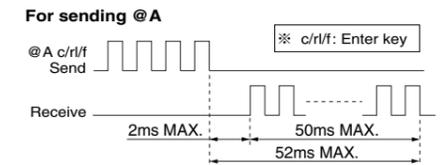

@AS\_1  
 ↑  
 1: ON  
 0: OFF

**@PHL**  
 Function: Sets ON/OFF for peak hold function.  
 Send example: @PHL\_1 c/r/f  
 Response example: OK c/r/f  
 Response example: NG c/r/f  
 21: illegal type

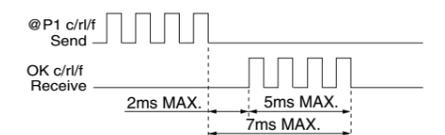

@PHL\_1  
 ↑  
 1: ON  
 0: OFF

**@BHL**  
 Function: Sets ON/OFF for bottom hold function.  
 Send example: @BHL\_1 c/r/f  
 Response example: OK c/r/f @BHL\_1  
 Response example: NG c/r/f  
 21: illegal type  
 1: ON  
 0: OFF

### Communication time chart

### For sending @P, @PRE, @MODE

### Hyperterminal setting method
