## Power joined with advanced functionality

The power of the SD cylinder as the basic large cylinders has been joined with advanced functionality.

● All bore sizes ( $\phi$  125 [4.921in.] ~  $\phi$  200 [7.874in.]) are non-lubrication types.

Although lubrication was previously required, the installation of grease pockets made it possible to make them non-lubrication types.

● Cylinder with magnet is standard.

Cylinders with magnet type are now standard for bore sizes  $\phi$ 125 [4.921in.] ~  $\phi$ 160 [6.299in.], making them easier to use.

## Mounting Accessory

## Handling Instructions and Precautions

### General precautions

#### Media

1. Use air for the media. For the use of any other media, consult us.
2. To operate the SD cylinder, use clean, compressed air that contains no moisture, dust, oxidized oil, and other impurities. Install an air filter (filtration of a minimum 40 μm) near the SD cylinder or valve to remove collected liquid or dust. In addition, drain the air filter periodically.

#### Piping

1. Always thoroughly blow off (use compressed air) the tubing before connecting it to the SD cylinder. Entering chips, sealing tape, rust, etc., generated during piping work could result in air leaks or other defective operation.
2. When screwing in piping or fittings to the SD cylinder, tighten to the requisite tightening torque shown below.

Connecting thread	Tightening torque N·m [ft·lbf]
Rc1/2	27~29 [19.9~21.4]
Rc3/4	27~29 [19.9~21.4]

#### Atmosphere

If using in locations subject to dripping water, dripping oil, etc., or to large amounts of dust, use a cover to protect the unit.

#### Lubrication

The non-lubrication specification means that lubrication is not required. If lubrication is required, use Turbine Oil Class 1 (ISO VG32) or lithium soap-based grease No.2 or equivalent. Also, be sure to limit the lubrication volume to an absolute minimum. Avoid using spindle oil or machine oil.

## Piston Rod Diameter Change and Repair Kits

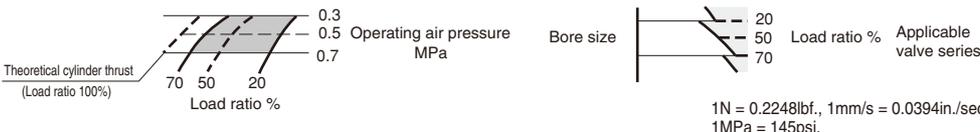

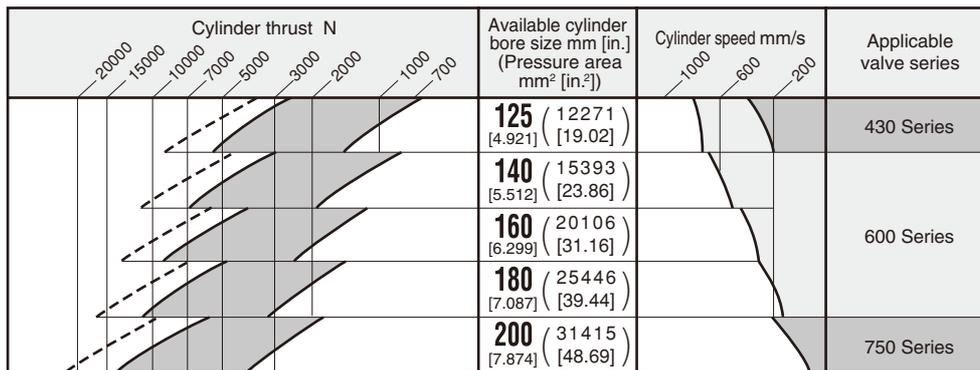

On April 7, 2000, we changed the piston rod diameters of SD cylinders with bore size of 125mm [4.921in.] and 140mm [5.512in.], as well as some of the seals. For this reason, the new repair kit **SRK-NSD125, 140 (SRK-NSDH125, 140)** cannot be used with products manufactured before the change. For repair kits for products manufactured earlier to the change, consult us.

# Selection of Cylinder and Valve

1. Select the cylinder bore in accordance with thrust requirements. 2. Determine the valve size in accordance with cylinder bore and speed.

## How to read the table

### 1. Selection of bore size

For cases where a 3000N [674lbf.] thrust is required with air pressure of 0.5MPa [73psi.], three bore sizes, φ 125 (load ratio of about 50%), φ 140 (load ratio of about 40%), and φ 160 (load ratio of about 30%) can be selected.

### 2. Selection of the applicable valve

When required cylinder speed is 200mm/s [7.9in./sec.], the load ratio at φ 125 is about 50%, which means that the applicable valve should be the 430 series. For φ 140, the load ratio is about 40%, which calls for the 600 series. In the same way, the load ratio at φ 160 is about 30%, and the applicable valve should be the 600 series.

### 3. Precautions concerning selection

For situations that require high-speed operation, or fixed-speed operation for fluctuating loads, select larger bore sizes and load ratios of 50% or less. Select sizes with allowance for valves, piping, and fittings, as well.

# Air Flow Rate and Air Consumption

While the air cylinder's air flow rate and air consumption can be found through the following calculations, the quick reference chart to the right provides the answers more conveniently.

## Air flow rate

$$Q_1 = \frac{\pi D^2}{4} \times L \times \frac{60}{t} \times \frac{P+0.101}{0.101} \times 10^{-6}$$

## Air consumption

$$Q_2 = \frac{\pi D^2}{4} \times L \times 2 \times n \times \frac{P+0.101}{0.101} \times 10^{-6}$$

- Q<sub>1</sub> : Required air flow rate for cylinder      ℓ /min (ANR)
- Q<sub>2</sub> : Air consumption of cylinder              ℓ /min (ANR)
- D : Cylinder tube inner diameter              mm
- L : Cylinder stroke                                  mm
- t : Time required for cylinder to travel 1 stroke      s
- n : Number of cylinder reciprocations per minute      times/min
- P : Pressure    MPa

## Air flow rate

$$Q_1' = \frac{\pi D'^2}{4} \times L' \times \frac{60}{t} \times \frac{P'+14.7}{14.7} \times \frac{1}{1728}$$

## Air consumption

$$Q_2' = \frac{\pi D'^2}{4} \times L' \times 2 \times n \times \frac{P'+14.7}{14.7} \times \frac{1}{1728}$$

- Q<sub>1</sub>' : Required air flow rate for cylinder      ft<sup>3</sup>/min. (ANR)\*
- Q<sub>2</sub>' : Air consumption of cylinder              ft<sup>3</sup>/min. (ANR)\*
- D' : Cylinder tube inner diameter              in.
- L' : Cylinder stroke                                  in.
- t : Time required for cylinder to travel 1 stroke      sec.
- n : Number of cylinder reciprocations per minute      times/min.
- P' : Pressure    psi.

\* Refer to p.54 for an explanation of ANR.

The figures in the table show the air flow rate and air consumption when an air cylinder makes 1 reciprocation with stroke of 1mm [0.039in.]. The air flow rate and air consumption actually required is found by the following calculations.

- Finding the air flow rate (for selecting F.R.L., valves, etc.)  
Example 1: When operating an air cylinder with bore size of 125mm [4.92in.] at speed of 200mm/s [7.9in./sec.], under air pressure of 0.5MPa [73psi.].

$$146.0 \times \frac{1}{2} \times 200 \times 10^{-3} = 14.6 \text{ ℓ /s [0.515ft}^3\text{/sec.]} \text{ (ANR)}$$

(The flow rate per minute at this time is  $146.0 \times \frac{1}{2} \times 200 \times 60 \times 10^{-3} = 876 \text{ ℓ /min [30.9ft}^3\text{/min.]} \text{ (ANR)}$ .)

- Finding the air consumption  
Example 1: When operating an air cylinder with bore size of 125mm [4.92in.] and stroke of 100mm, under air pressure of 0.5MPa [73psi.] for 1 reciprocation.

$$146.0 \times 100 \times 10^{-3} = 14.6 \text{ ℓ [0.515ft}^3\text{]/reciprocation (ANR)}$$

Example 2: When operating an air cylinder with bore size of 125mm [4.92in.] and stroke of 100mm, under air pressure of 0.5MPa [73psi.] for 10 reciprocations per minute.

$$146.0 \times 100 \times 10 \times 10^{-3} = 146 \text{ ℓ /min [5.15ft}^3\text{/min.]} \text{ (ANR)}$$

# Cylinder Thrust

Select a suitable cylinder bore size considering the load and air pressure to obtain the required thrust.

Since the figures in the table are calculated values, select a bore size that results in a load ratio (load ratio =  $\frac{\text{Load}}{\text{Calculated value}}$ ) of 70% or less (50% or less for high speed application).

### Cylinder specification

Z — Heavy duty rod cylinder

### Mounting type

- 0 — Basic type
- 1 — Foot mounting type
- 3 — Rod side flange mounting type
- 5 — Head side flange mounting type
- 7 — Clevis mounting type (with pin)
- 8 — Pivot mounting type
- 11 — Trunnion mounting type

### Rod end accessory

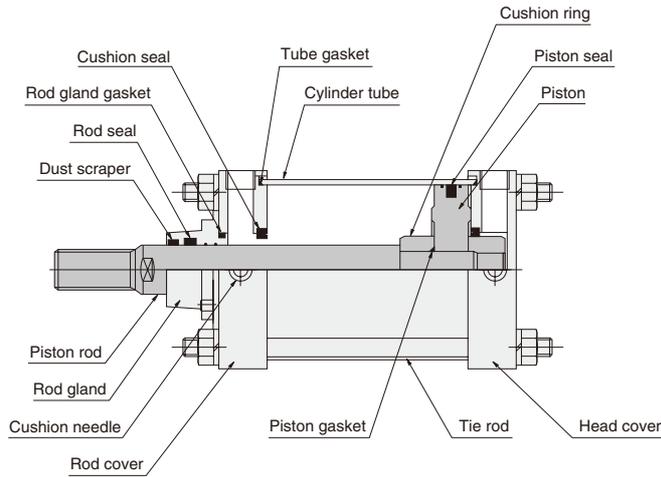

- Blank — No rod end accessory
- Y — With Y type knuckle (with pin)
- I — With I type knuckle

### Rod end nut

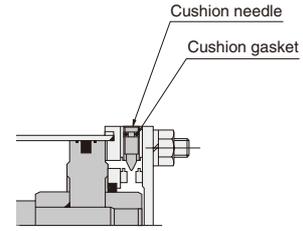

- Blank — No nut
- N1 — With 1 nut
- N2 — With 2 nuts

## Major Parts and Materials

Parts	Bore size mm	125	140	160	180	200
Cylinder tube		Steel pipe (inside: hard chrome plated, outside:silver metallic painted)				
Piston		Cast iron				
Piston rod		Steel (hard chrome plated )				
Cushion ring		Mild steel (zinc plated)				
Rod cover		Mild steel (black oxide)				
Head cover						
Tie rod		Mild steel (zinc plated)				
Rod gland		Aluminum alloy (hard anodized)		Cast iron (painted)		
Seal		Synthetic rubber (NBR)				

Parts	Bore size mm	125	140	160	180	200
Foot mounting bracket		Mild steel (painted)				
Flange mounting bracket		Cast iron (manganese treated)				
Clevis mounting bracket						
Pivot mounting bracket						
Trunnion mounting bracket		Cast iron (manganese treated)				
Bellows		Nylon tarpaulin				
I type knuckle		Steel (alkali coloring)				
Y type knuckle		Cast iron (manganese treated)			Mild steel (alkali coloring)	
Pin		Steel (zinc plated)

Remark : Items marked with a star (★) are available as repair kits. The order code is the **SRK-NSD** [Bore size].

Note that the contents of a repair kit is 1 dust scraper, 1 rod seal, 1 piston seal, and 2 cylinder tube gaskets.

Note, however, that the repair kits with bore size of 125mm and 140mm cannot be used with SD cylinders manufactured prior to April 6, 2000 (because the piston rod diameters have been changed). For details, see p.543.

### ● About stroke 1 and stroke 2

Stroke 1 is the stroke of cylinder 1.  
 Stroke 2 is obtained by subtracting stroke 1 from the stroke of cylinder 2.

Remark: Figures in parentheses ( ) are for cylinders with magnets.  
 Calculation example: For standard cylinder, foot mounting type, with bore size of 140mm, Stroke 1 of 100mm and Stroke 2 of 50mm,  
 $37.5 + (0.0586 \times 100) + (0.0291 \times 50) = 44.815\text{kg}$  [98.799lb.]  
 Note: For lead wire length A (1000mm [39in.]).

## Operation of Tandem Cylinders

Tandem Cylinders are a set of 2 cylinders joined end to end.  
 It can be used as a 2-stage stroke cylinder by supplying air to either Port A or Port B.

**Caution** Do not use SD tandem cylinders with double the cylinder thrust.

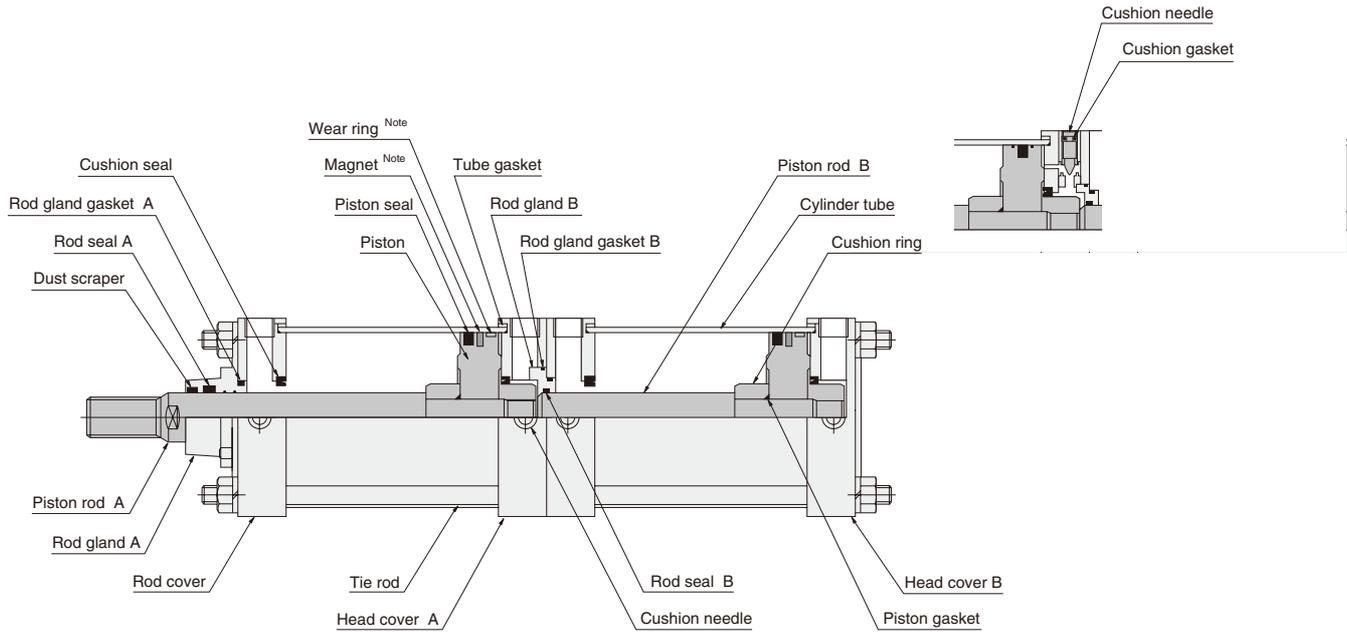

The rods retract strokes 2 and 1 when air is supplied from Port C.

The rod moves stroke 1 when air is supplied from Port A.

The rod moves stroke 2 when air is supplied from Port B.

Remark : Items marked with a star (★) are available as repair kits. The order code is the **SRK-NSD** [Bore size] .

Note that the contents of a repair kit is 1 dust scraper, 1 rod seal, 1 piston seal, and 2 cylinder tube gaskets.

Note, however, that the repair kits with bore size of 125mm and 140mm cannot be used with SD cylinders manufactured prior to April 6, 2000 (because the piston rod diameters have been changed). For details, see p.543.

## Operation of Dual Stroke Cylinders

Dual Stroke Cylinders are a set of 2 cylinders connected back to back.

The cylinder body can be secured in place and each stroke can be controlled separately. It can also be used to obtain 2-stage or 3-stage strokes by securing the piston rod on one side in place.

The rods retract stroke 1 and stroke 2 when air is supplied from Ports (A) and (D).

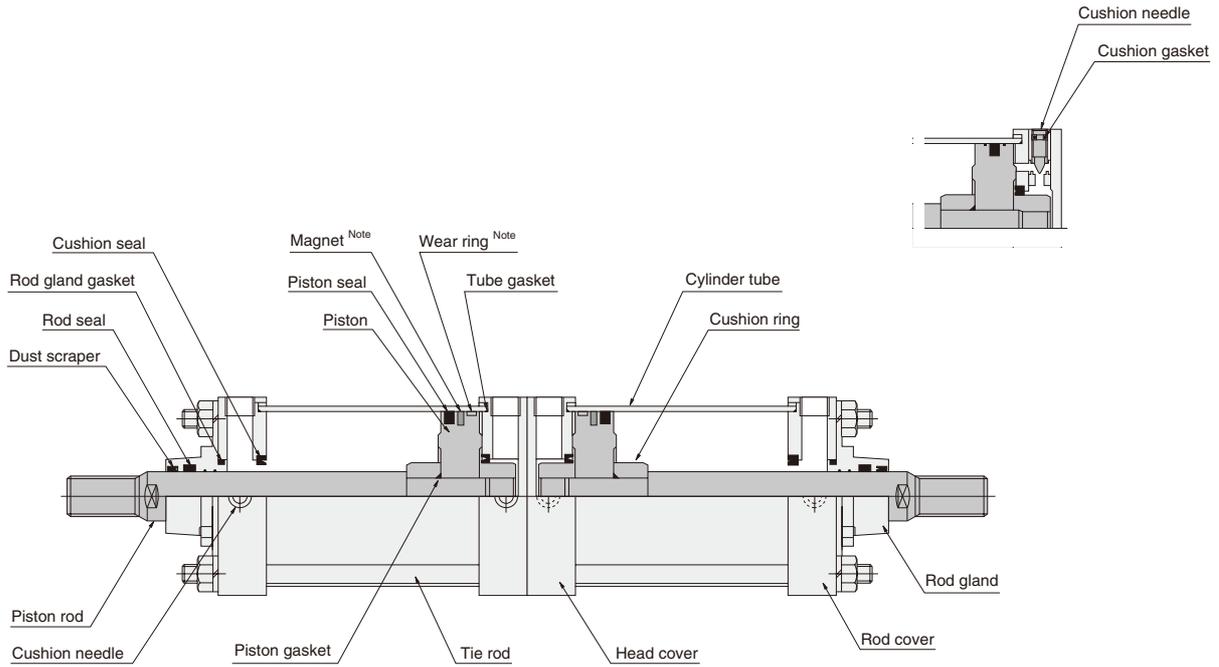

The rod moves stroke 1 when air is supplied from Ports (B) and (D).

The rod moves stroke 2 when air is supplied from Ports (A) and (C).

The rod moves stroke 1 and stroke 2 when air is supplied from Ports (B) and (C).

Remark: Items marked with a star (★) are available as repair kits. The order code is the **SRK-NSD** [Bore size].

Note that the contents of a repair kit is 1 dust scraper, 1 rod seal, 1 piston seal, and 2 cylinder tube gaskets.

Note, however, that the repair kits with bore size of 125mm and 140mm cannot be used with SD cylinders manufactured prior to April 6, 2000 (because the piston rod diameters have been changed). For details, see p.543.

## ● Stroke adjustment

To adjust the stroke, turn the stroke adjusting knob. After adjustment, secure it in place with a lock nut. When mounting the sensor switch, move sensor switch mounting location as the length of the adjusted stroke.

## Major Parts and Materials

Parts	Bore size mm	125	140	160	180	200
Cylinder tube	Standard cylinder	Steel pipe (inside: hard chrome plated, outside: silver metallic painted)				
	Cylinder with magnet	Aluminum alloy (hard anodized)		—		
Piston		Cast iron <sup>Note</sup>				
Piston rod		Steel (hard chrome plated) (-RS : SUS)				
Cushion ring		Mild steel (zinc plated)				
Rod cover		Mild steel (black oxide)				
Tie rod		Mild steel (zinc plated)				
Rod gland		Aluminum alloy (hard anodized)				
Wear ring		Plastic	—			
Magnet		Rubber magnet		—		
Seal		Synthetic rubber (NBR)				
Stroke adjusting knob		Aluminum alloy (anodized)				

Parts	Bore size mm	125	140	160	180	200
Stroke adjusting bolt		Steel (zinc plated)		—		
Stroke adjusting bracket		Mild steel (painted)		—		
Stopper		Mild steel (zinc plated)		—		
Bumper		Synthetic rubber (urethane rubber)				
Foot mounting bracket		Steel (painted)				
Flange mounting bracket		Cast iron (manganese treated)				
Trunnion mounting bracket		Cast iron (manganese treated)				
Bellows		Nylon tarpaulin				
I type knuckle		Mild steel (alkali coloring)				
Y type knuckle		Cast iron (manganese treated)				
Pin		Steel (zinc plated)				

Note: The cylinder with magnet is aluminum alloy.

Remarks: 1. Figures in parentheses ( ) are for pull side stroke adjusting type.

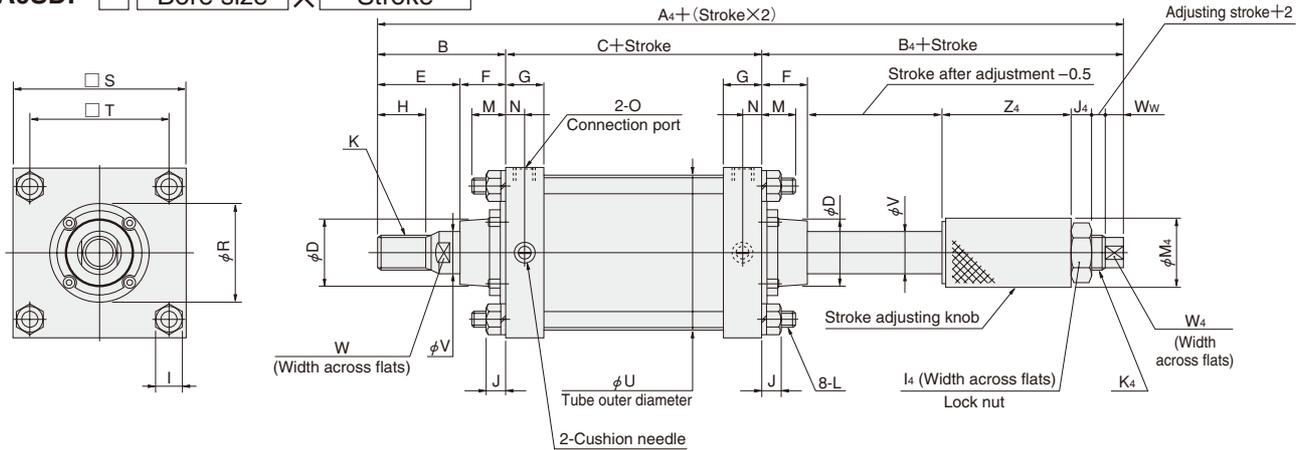

2. Items marked with a star (★) are available as repair kits. The order code is the **SRK-NSD** [Bore size].

Note that the contents of a repair kit is 1 dust scraper, 1 rod seal, 1 piston seal, and 2 cylinder tube gaskets.

Note, however, that the repair kits with bore size of 125mm and 140mm cannot be used with SD cylinders manufactured prior to April 6, 2000 (because the piston rod diameters have been changed). For details, see p.543.

# Inner Construction and Major Parts

## ● Air bleed port

## ● How to bleed air

With the air bleed port facing up, loosening the air bleed screw will let the air out of the cylinder.

## Major Parts and Materials

Parts	Bore size mm	125	140	160	180	200
Cylinder tube		Steel pipe (inside: hard chrome plated, outside:silver metallic painted)				
Piston		Cast iron				
Piston rod		Steel (hard chrome plated) (-RS : SUS)				
Cushion ring		Mild steel (zinc plated)				
Rod cover		Mild steel (black oxide)				
Head cover						
Tie rod		Mild steel (zinc plated)				
Rod gland		Aluminum alloy (hard anodized)				
Seal		Synthetic rubber (NBR)				

Parts	Bore size mm	125	140	160	180	200
Foot mounting bracket		Mild steel (painted)				
Flange mounting bracket		Cast iron (manganese treated)				
Clevis mounting bracket						
Pivot mounting bracket						
Trunnion mounting bracket		Cast iron (manganese treated)				
Bellows		Nylon tarpaulin				
I type knuckle		Mild steel (alkali coloring)				
Y type knuckle		Cast iron (manganese treated)				
Pin		Steel (zinc plated)

Remark: Items marked with a star (★) are available as repair kits. The order code is the **SRK-NSDH** [Bore size].

Note that the contents of a repair kit is 1 dust scraper, 1 rod seal, 1 piston seal, and 2 cylinder tube gaskets.

Note, however, that the repair kits with bore size of 125mm and 140mm cannot be used with SD cylinders manufactured prior to April 6, 2000 (because the piston rod diameters have been changed). For details, see p.543.

### Sensor Switch Operating Range, Response Differential, and Maximum Sensing Location

- Operating range:  $l$**   
 The distance the piston travels in one direction, while the switch is in the ON position.
- Response differential: C**  
 The distance between the point where the piston turns the switch ON and the point where the switch is turned OFF as the piston travels in the opposite direction.

Sensor switch model	mm [in.]

Operation range: $l$	5 ± 1.5 [0.197 ± 0.059]	12.5 ± 3 [0.492 ± 0.118]
Response differential: C	1 [0.039] MAX.	3 [0.118] MAX.
Maximum sensing location <sup>Note</sup>	8.5 [0.335]	7 [0.276] 10.5 [0.413]

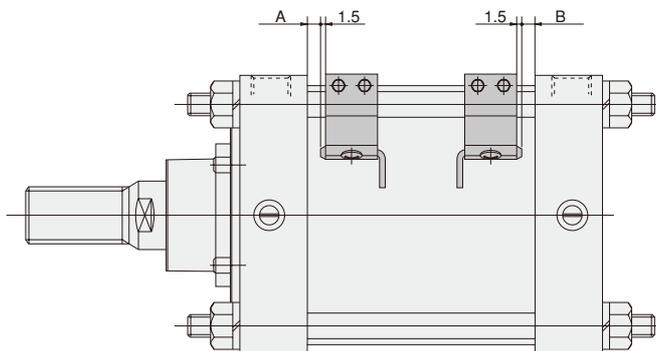

Note: This is the length measured from the opposite end side of the indicator to the lead wire.

Remark: the above table shows reference values at normal temperature (25°C [77°F]).

## Mounting Location of Sensor Switch

When the sensor switch is mounted in the location shown in the diagram (figures in the tables are reference values), the magnet comes to the sensor switch's maximum sensing location at the end of the stroke.

	CS11T	A	6 [0.236]	7 [0.276]	8.5 [0.335]
		B	1 [0.039]	0 [0]	0 [0]

- Notes: 1. When a sensor switch is mounted with the lead wire facing on the outer side (opposite direction shown in the diagram), the maximum sensing location does not come at the end of the stroke.  
2. For the trunnion mounting type, set the maximum sensing location at least 15mm [0.591in.] away from the trunnion bracket end surface.

## Mounting and Moving Sensor Switch

- As shown in the diagram, mount the sensor switch ① to the holder ④ with the washer ② and the screw ③, as the model marking surface facing upward. (Tightening torque: 70N·cm [6.2in·lbf])  
At this time, mount so that only the sensor switch indicator lamp protrudes from the holder.  
To protect the switch, however, make sure the switch body does not protrude from the holder.

- Fit the holder onto the position for the SD cylinder tie rod, and use an Allen wrench (width across flats B=3) to secure the holder with the screw ⑤ in place. (Tightening torque: 200N·cm [17.7in·lbf])  
At this time, mount the bottom of the holder comes in contact with the cylinder tube.  
The holder can be mounted on either side of the sensor switch. Moreover, no matter which tie rod is used, the holder and sensor switch can be freely mounted in any direction.
